

Brugada syndrome: tests and diagnosis.

Torino, 27 ottobre 2017

Carla Giustetto

Divisione di Cardiologia
Università di Torino

Ospedale “Città della Salute e della Scienza”

Brugada syndrome: diagnosis

- ✓ **J point $\geq 2\text{mm}$**
- ✓ **Coved type ST segment elevation**
- ✓ **Negative T wave**

EPS

Brugada Piedmont Registry

826 pts → 12 diagnosed after Sudden Death

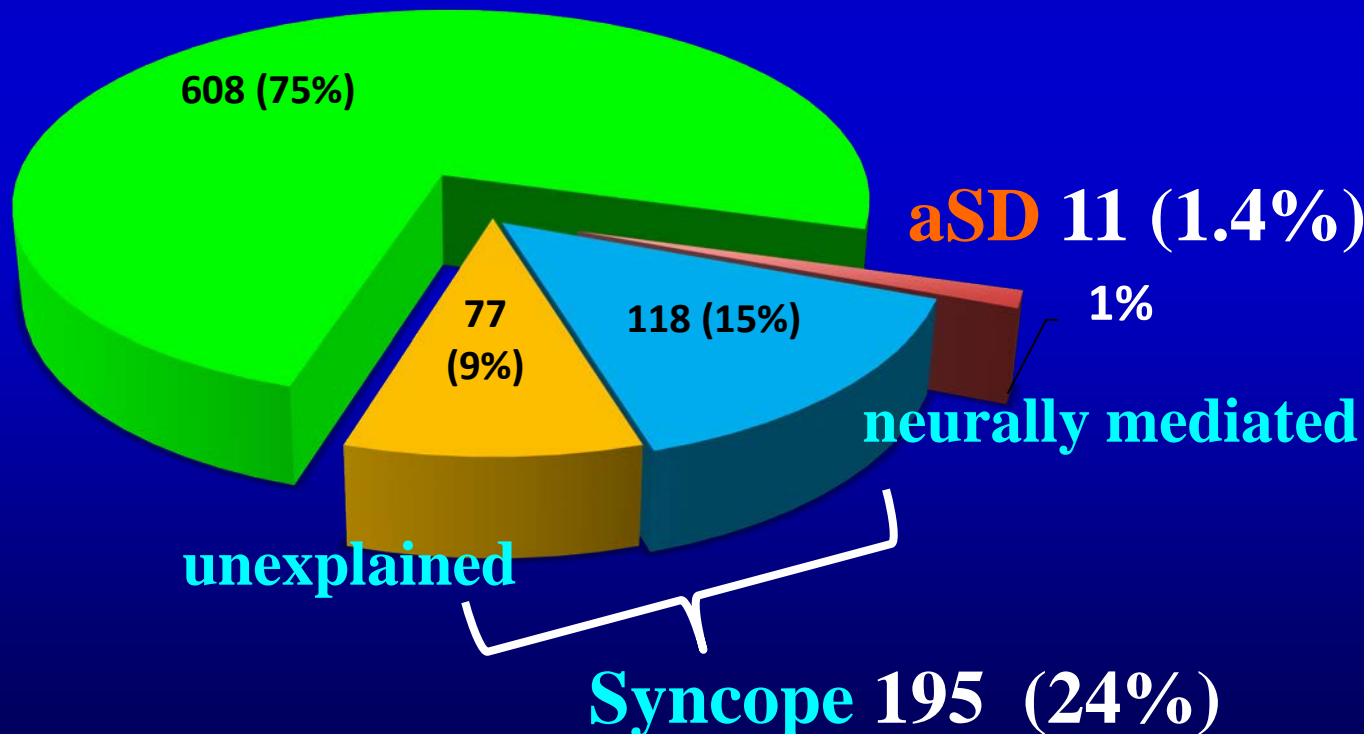

total 814 pts

2001-2016

Symptoms at presentation

Asymptomatic 608

- Torino
- Asti
- Vercelli
- Orbassano
- Rivoli
- Cuneo
- Novara
- Savigliano

A 45 years old man: traumatic syncope, which occurred after awakening at 6.30 a.m, while he was in the bathroom, with doubtful prodromes

1st ECG: sinus rhythm, normal conduction, non-significant ST-T alterations

Head-up tilt test (HUTT)

Tilt test was negative but

ST segment in V1-V2 with a type 2 Brugada pattern was recorded

**Pt with syncope
+
suspect Brugada ECG
(type 2)**

**Which investigations are
reasonable/recommended?**

**ECG with V1-V2 at
2nd and 3rd intercostal space (ICS)**

ECG was recorded with V1-V2 at a higher intercostal space →
in this case it remained doubtful, still not diagnostic

ECG 4th ICS

V1 - 2° ICS

V2 - 2° ICS

Which investigations are reasonable/recommended?

Pt with syncope
+
suspect Brugada ECG
pattern (type 2)

ECG with V1-V2 at
2nd and 3rd intercostal space

type 2 Brugada
ECG

Drug challenge with
sodium channel
blockers

Pharmacological challenge with Na⁺-channel blockers was performed...

Basal ECG

Ajmaline infusion (1mg/kg in 5 min)

Summary...

- ✓ 45 years old man
- ✓ syncope of uncertain origin
- ✓ Drug induced type 1 Brugada ECG pattern

What does literature report ?

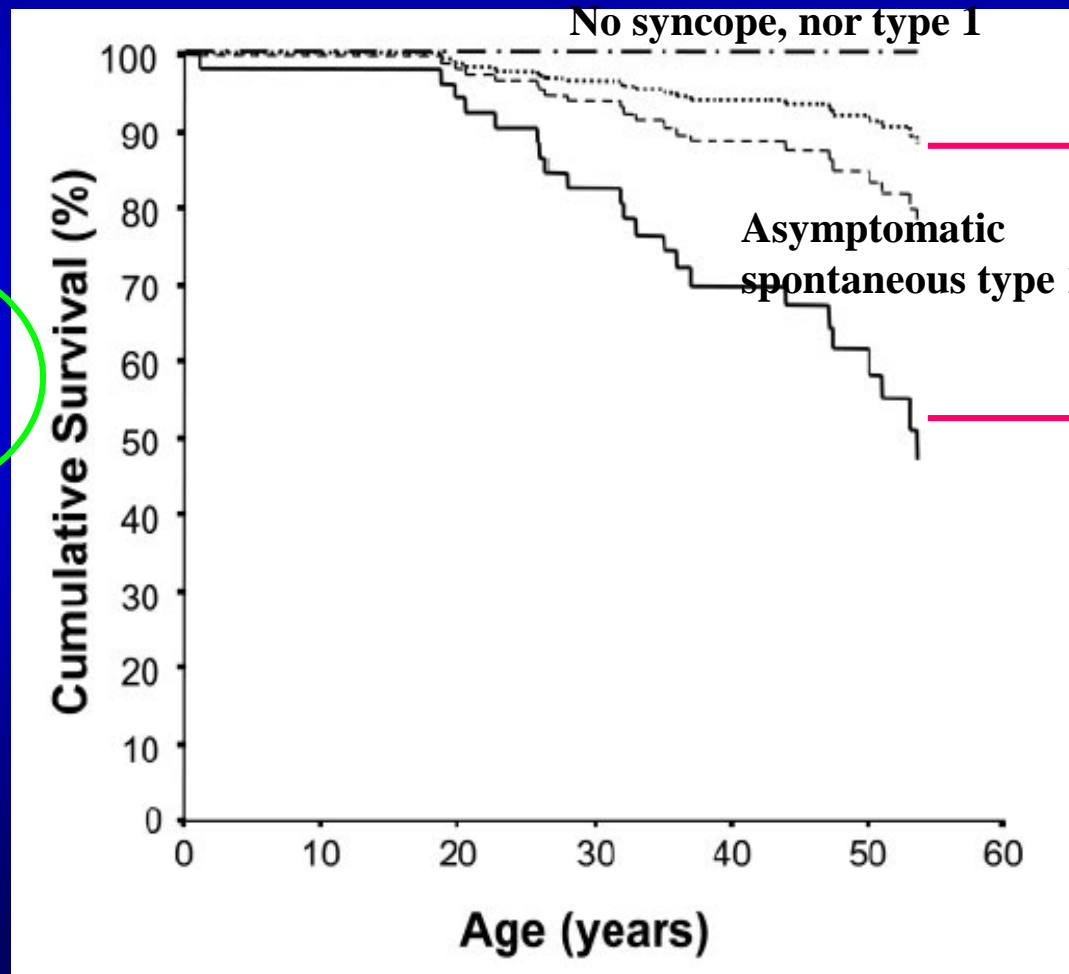

What do guidelines recommend ?

12-lead 24-hour Holter monitoring: intermittent spontaneous type 1 Brugada pattern

Summary...

- ✓ 45 years old man
- ✓ syncope of uncertain origin
- ✓ drug induced type 1 Brugada ECG pattern and
- ✓ spontaneous type 1 documented at f-up

What do guidelines recommend?

What does literature report?

Which Brugada patients to treat: Guidelines

2015 ESC Guidelines for the management of patients with ventricular arrhythmias and the prevention of sudden cardiac death

EUROPEAN
SOCIETY OF
CARDIOLOGY®

2015

ICD implantation should be considered in patients with a spontaneous diagnostic type I ECG pattern and history of syncope.

IIa

C

ICD implantation may be considered in patients with a diagnosis of Brugada syndrome who develop VF during PVS with two or three extrastimuli at two sites.

IIb

C

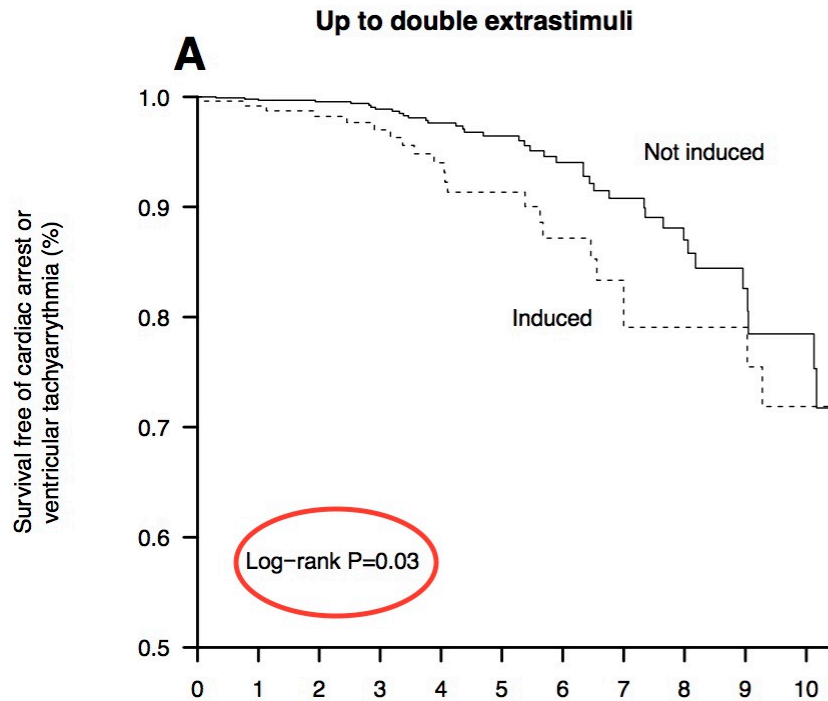

Role of EP-study in Brugada pts (overall population)

	0	12	24	36	48	60	72
negative	376	301	237	187	136	94	59
positive	262	212	161	113	81	52	34

Programmed Ventricular Stimulation for Risk Stratification in the Brugada Syndrome
