GIORNATE CARDIOLOGICHE TORINESI

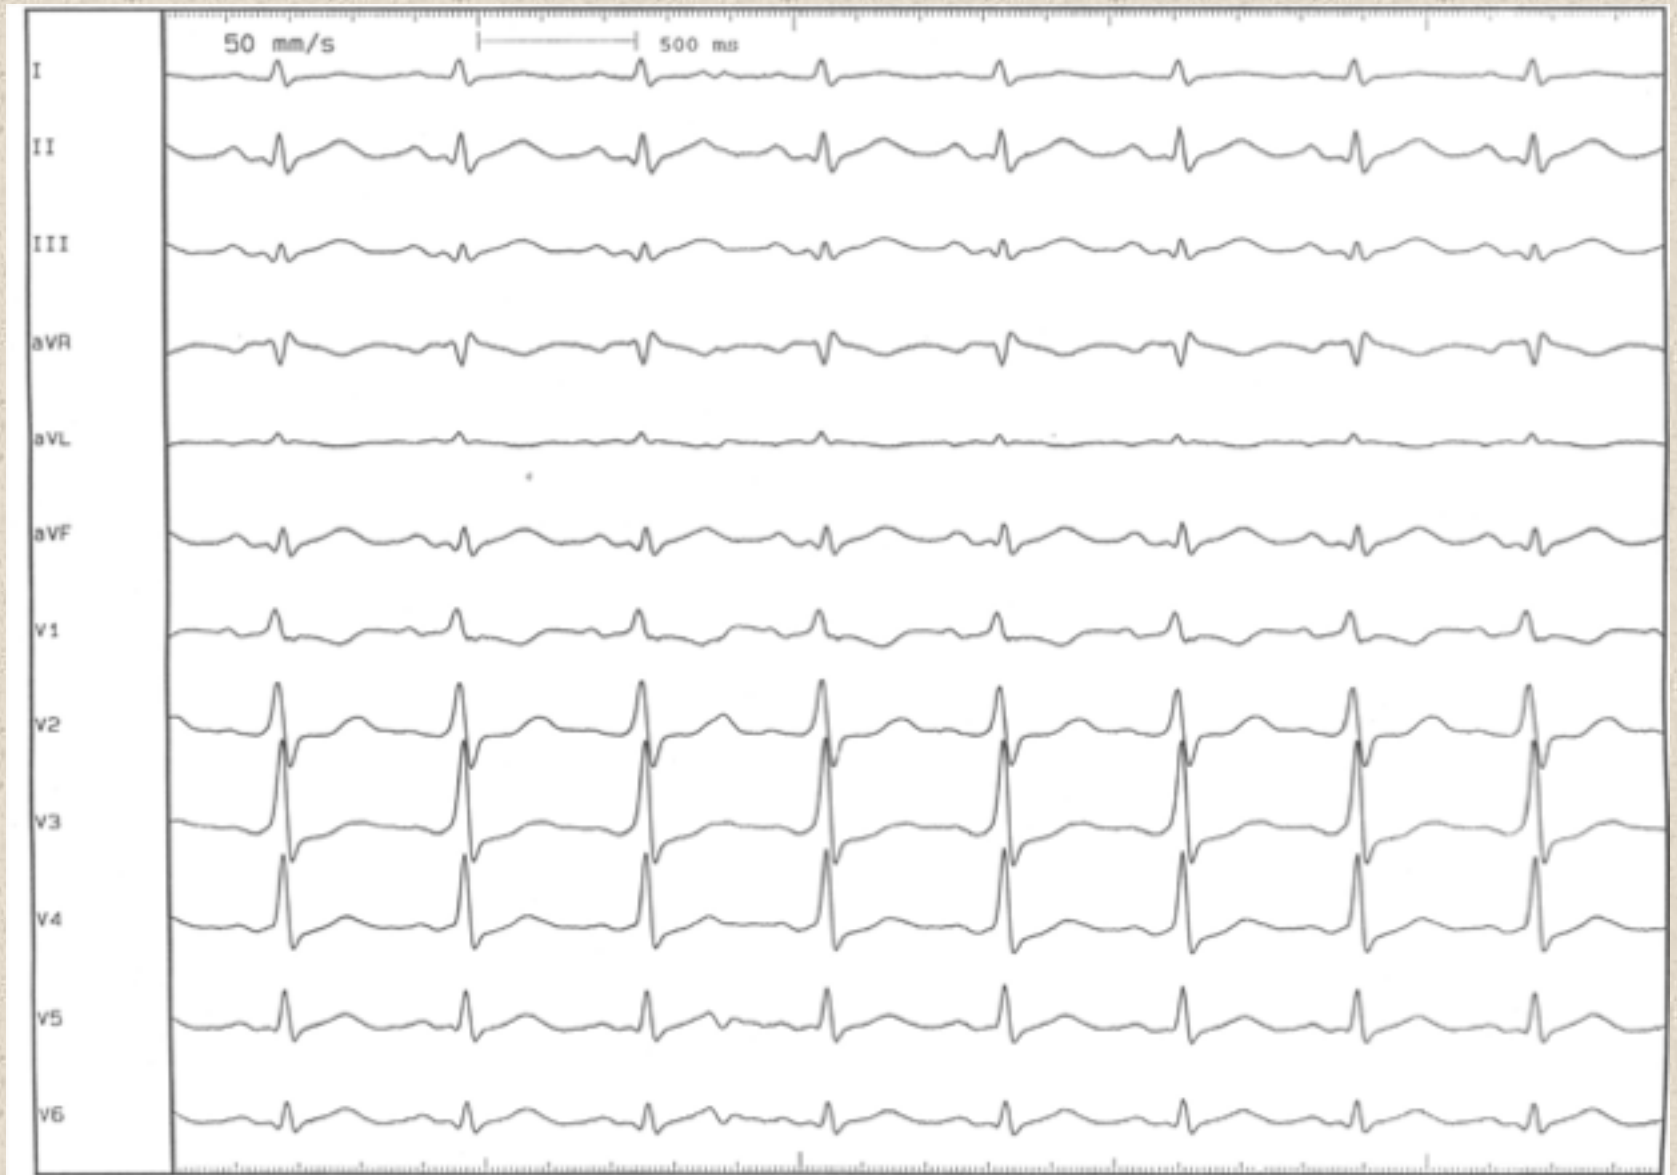

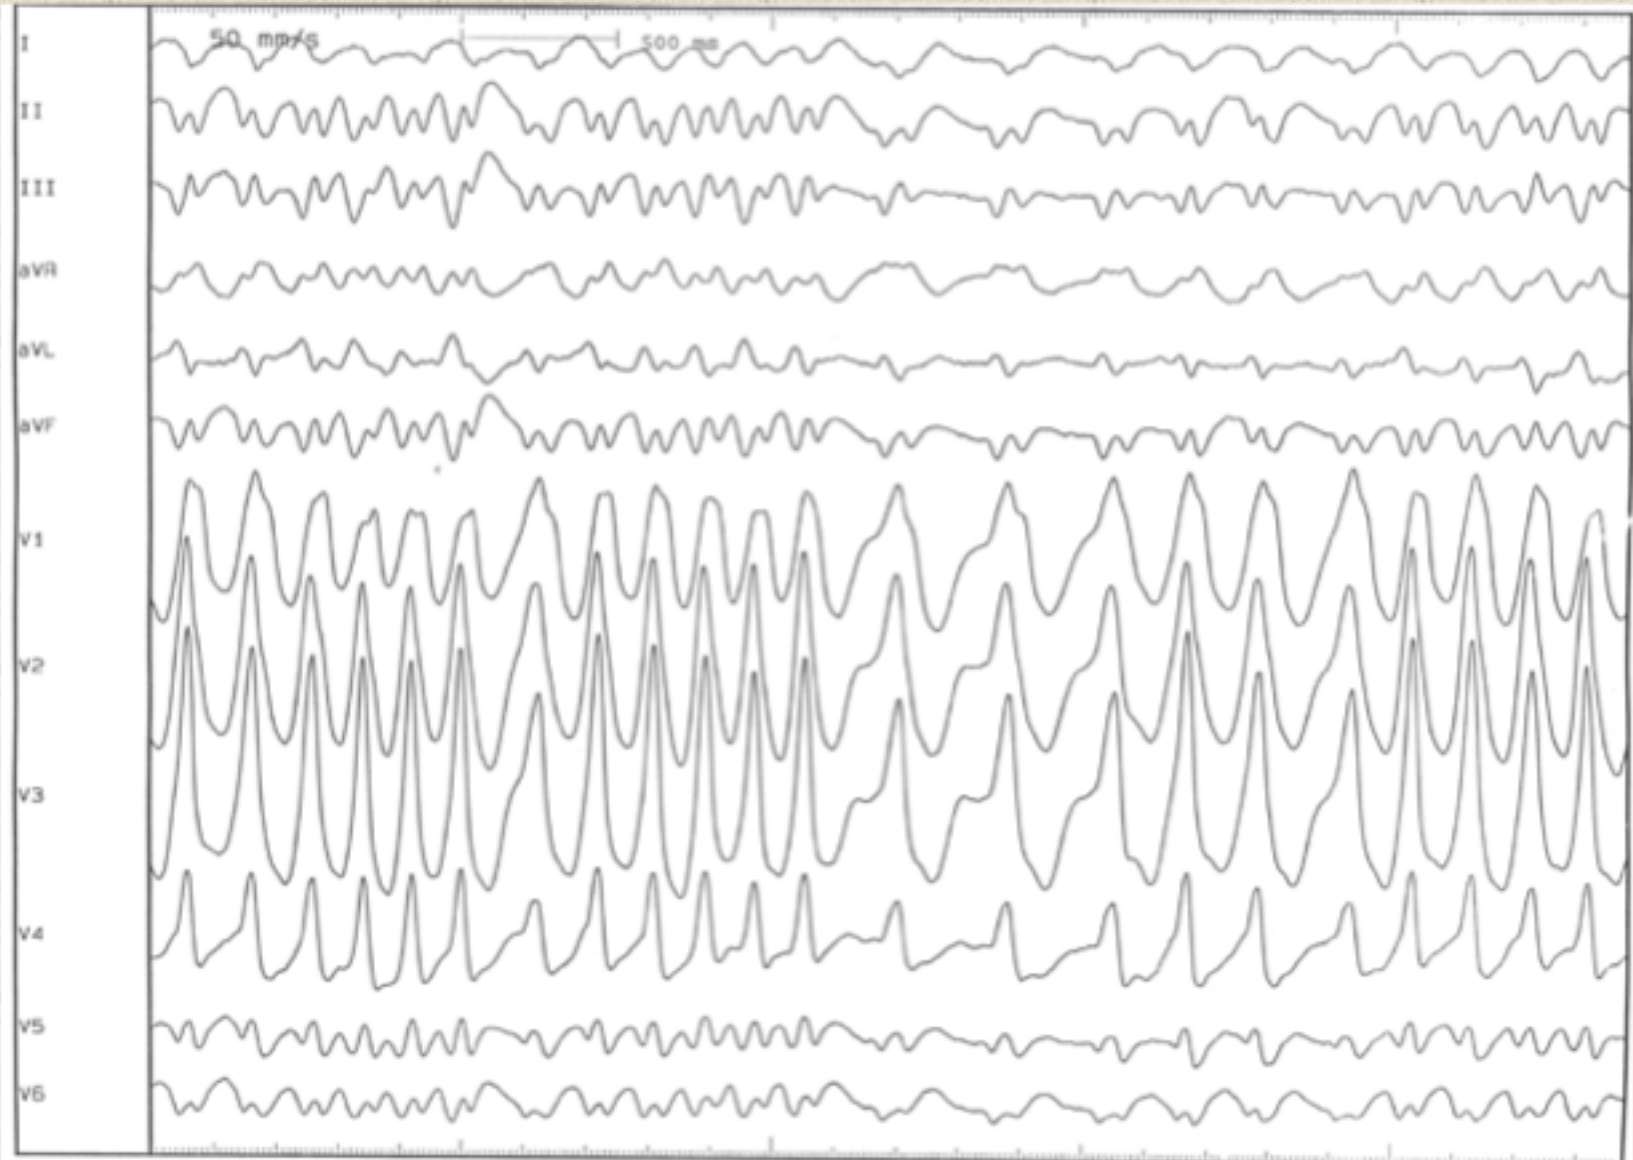

The ECG: A forgotten Tool for Risk Stratification

Prof. Dr. Martin Borggrefe
Mannheim

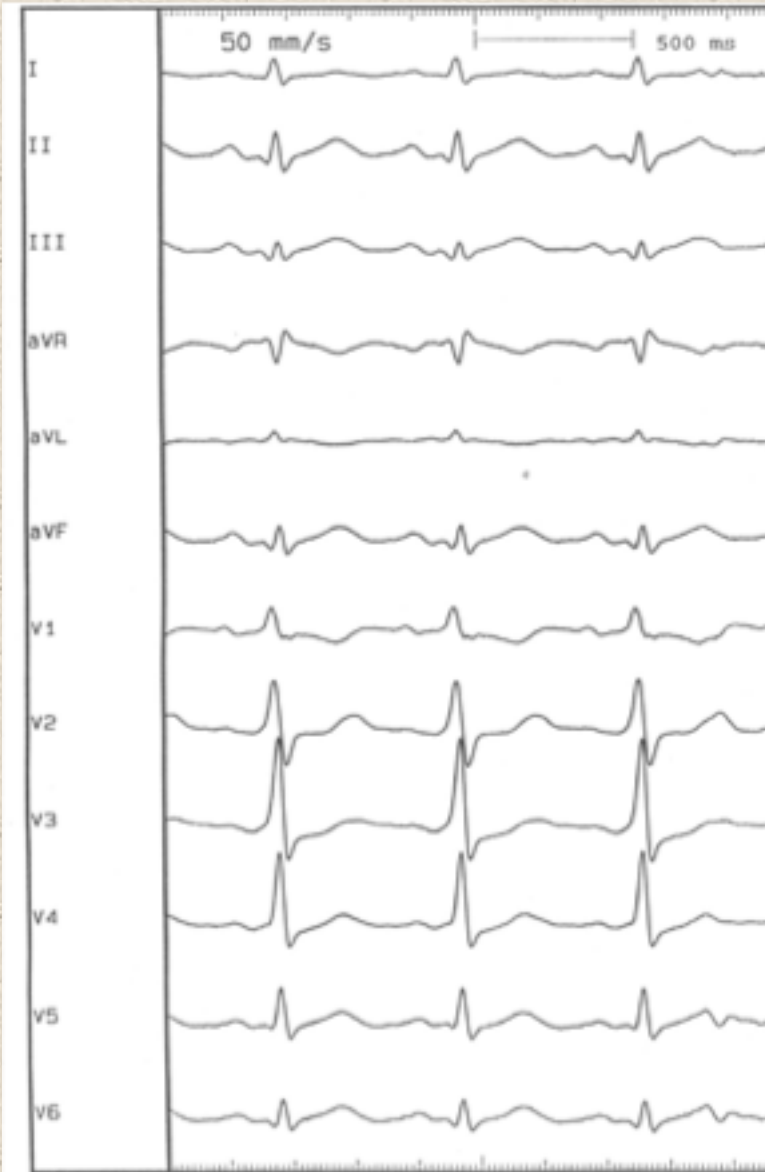

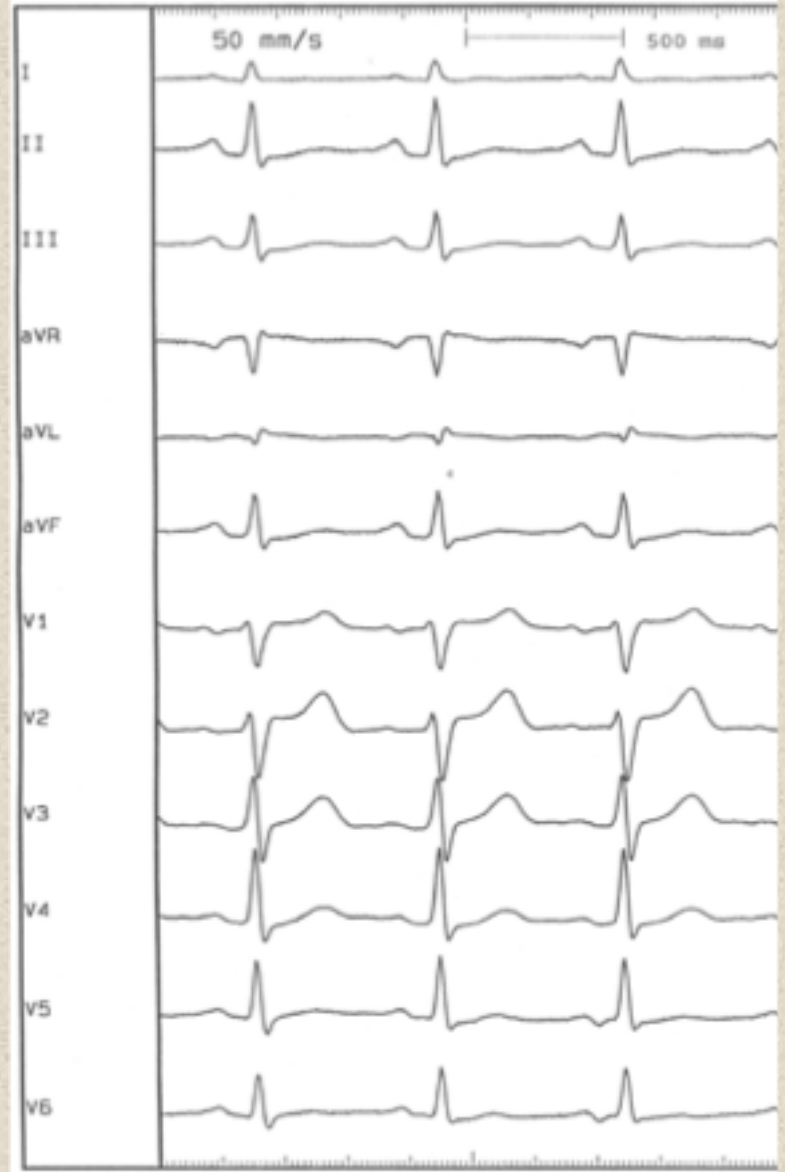

pre

post

Sudden death in WPW syndrome

85% male gender

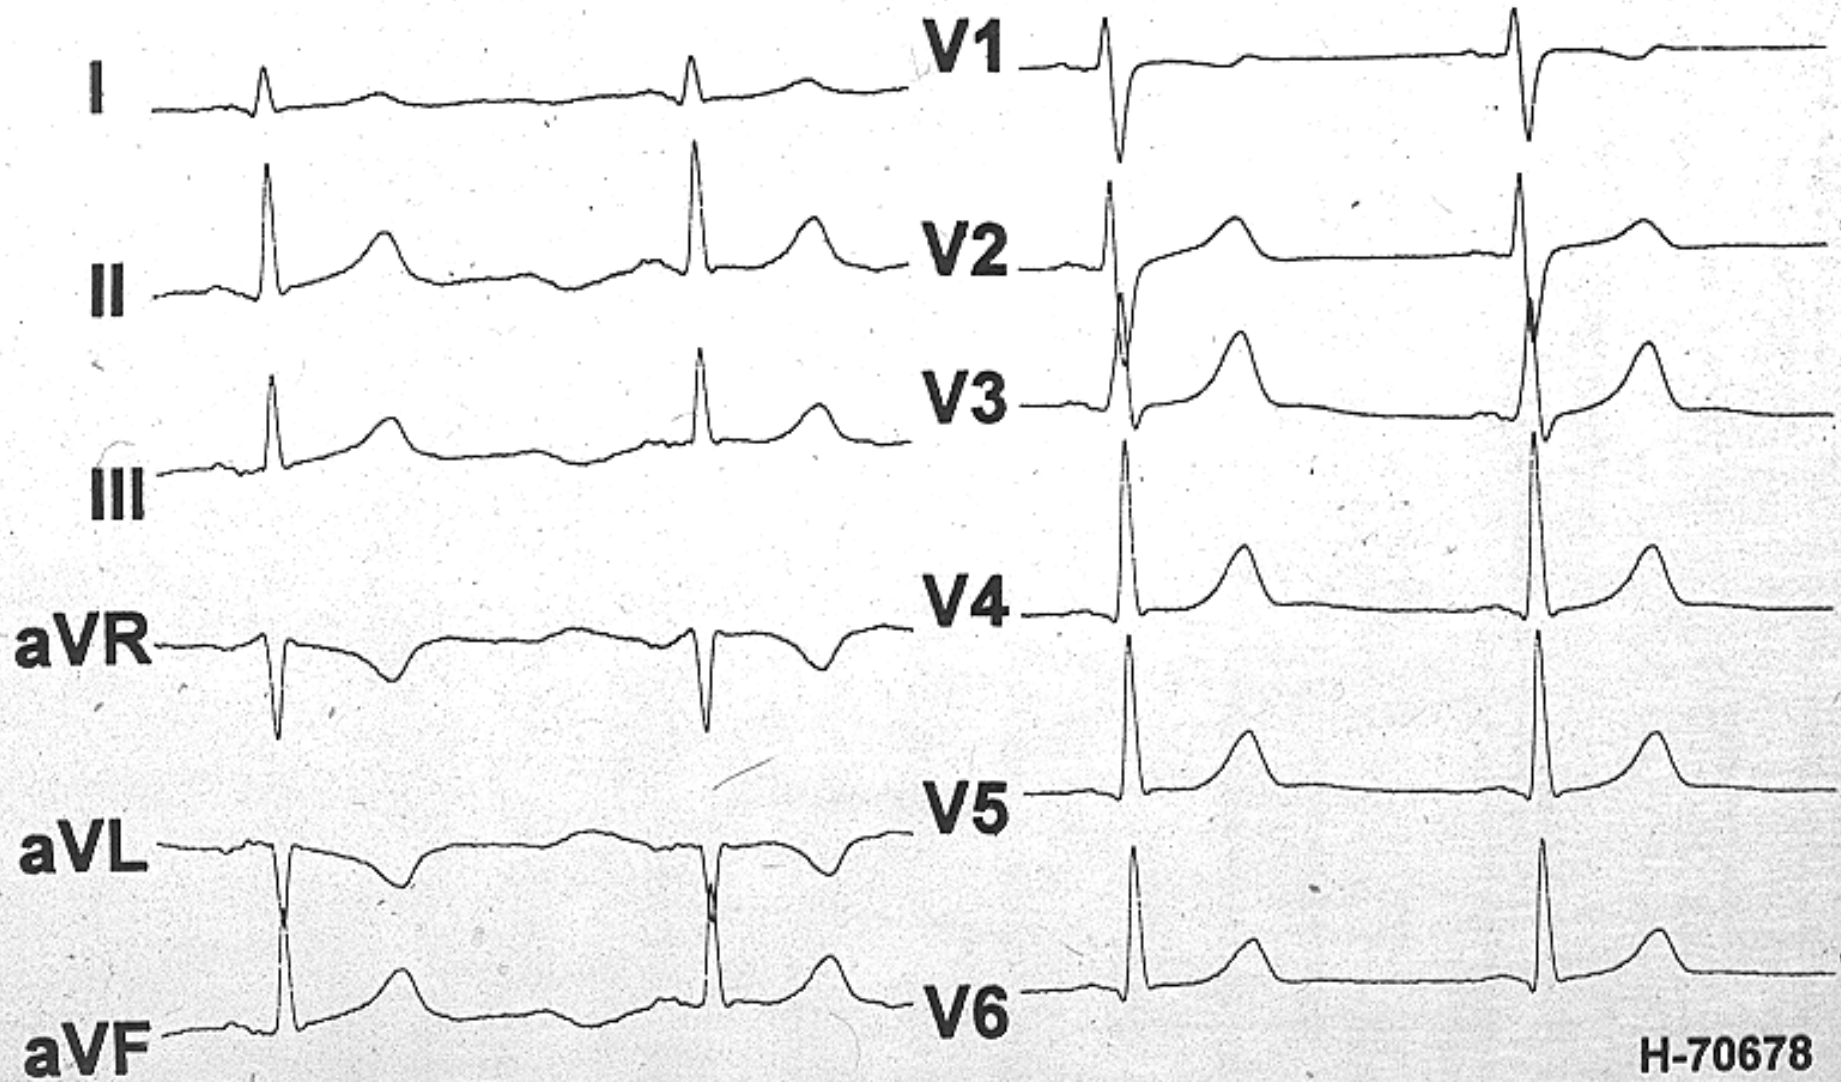

shortest RR during AF ≤ 220 ms

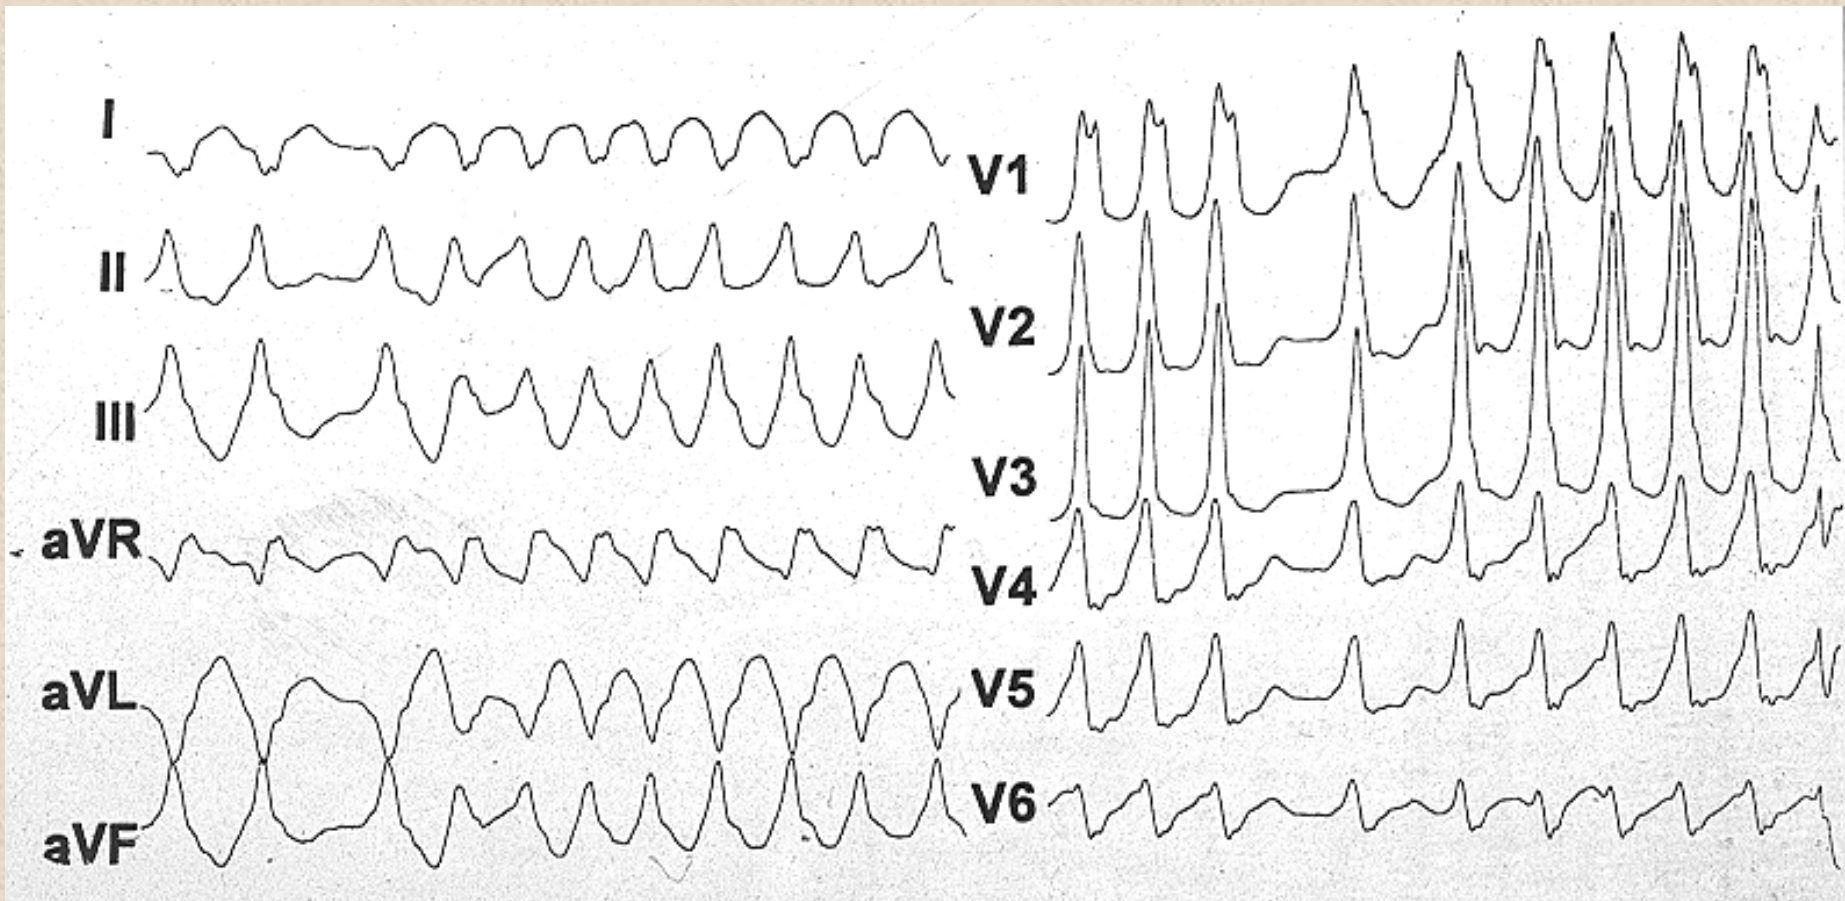

septal AP location

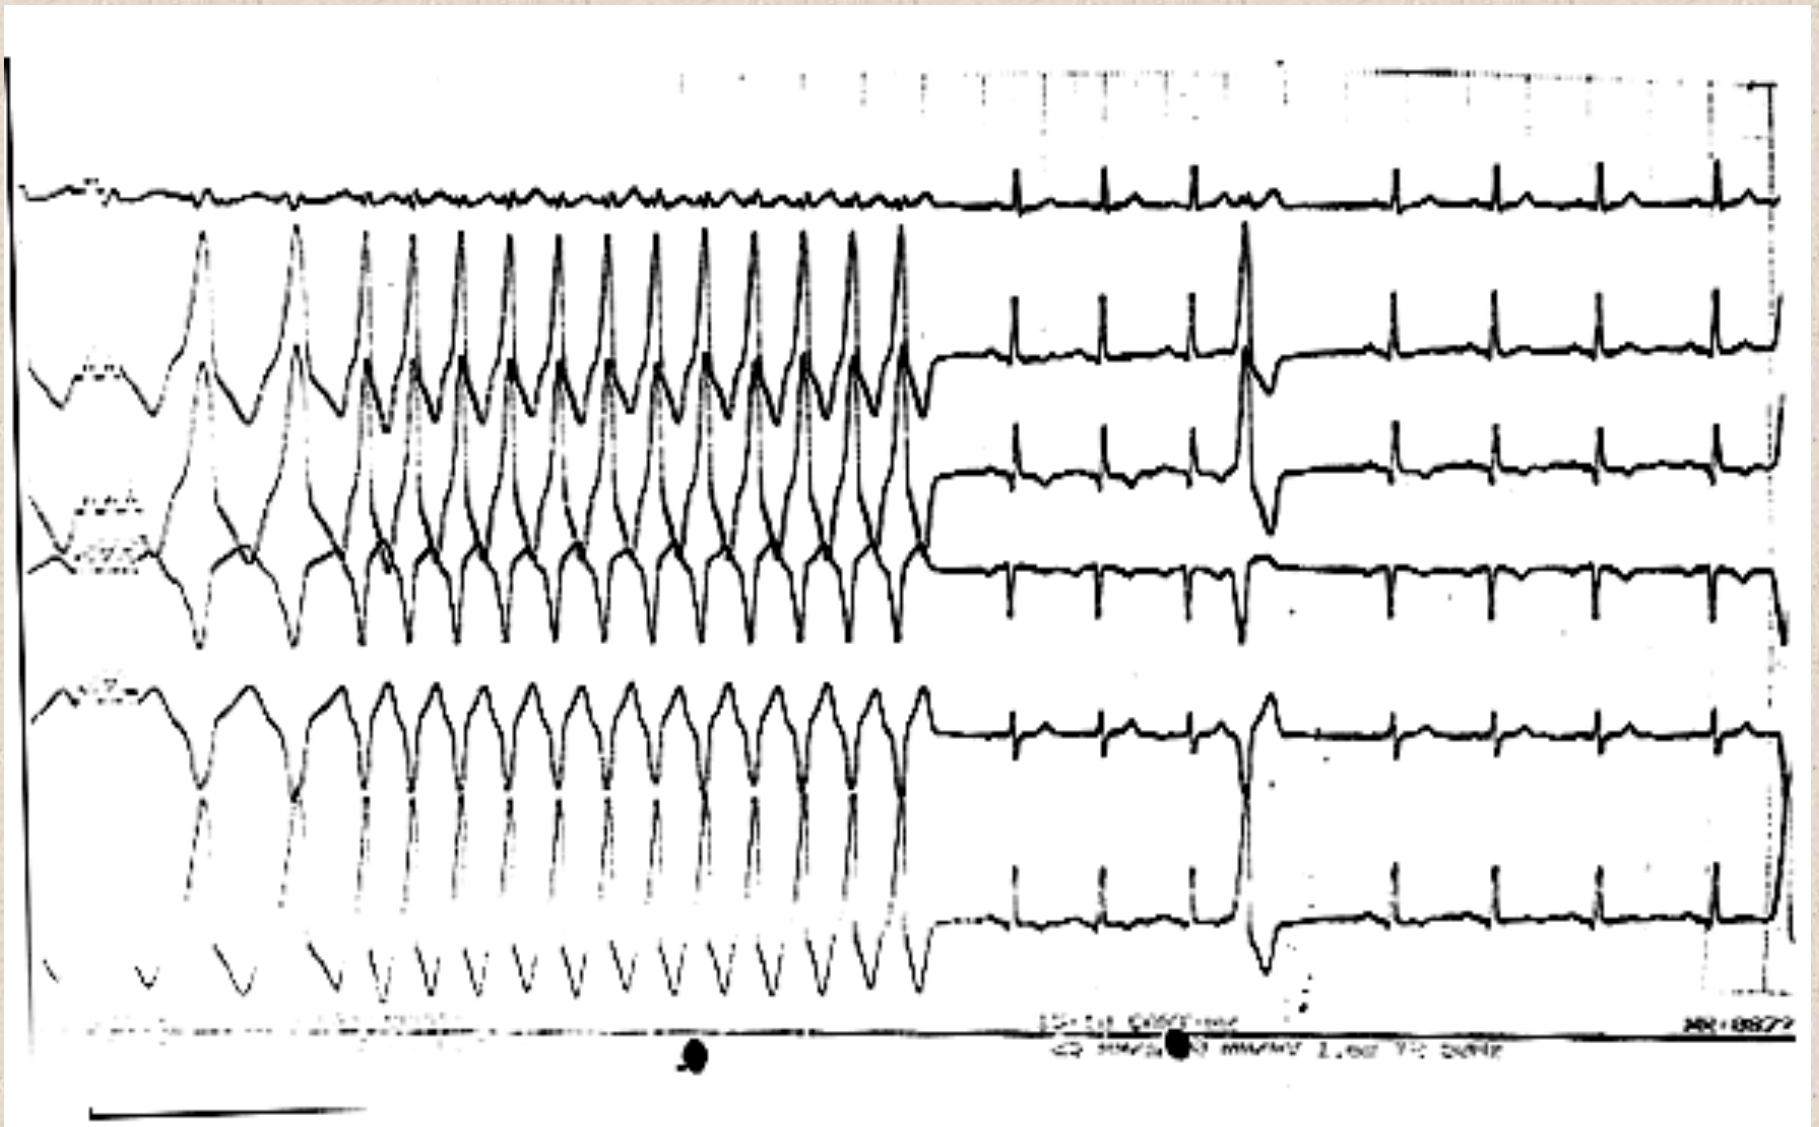

high catecholamine state

multiple AP's

digitalis

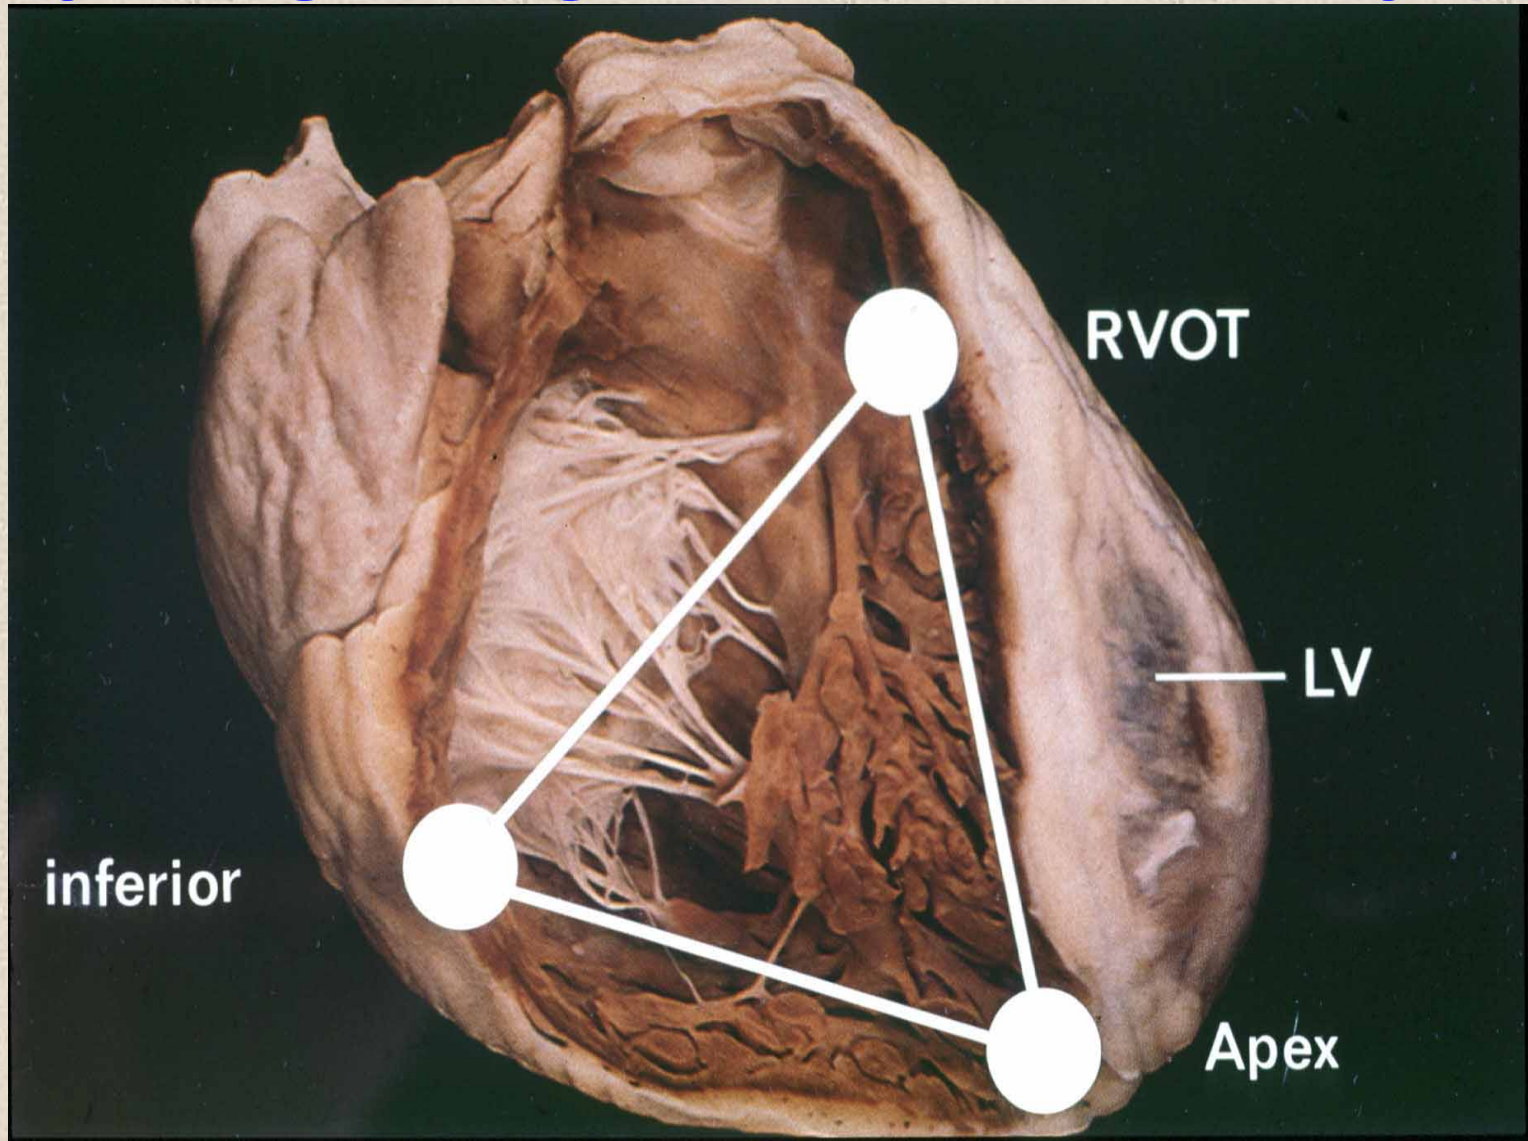

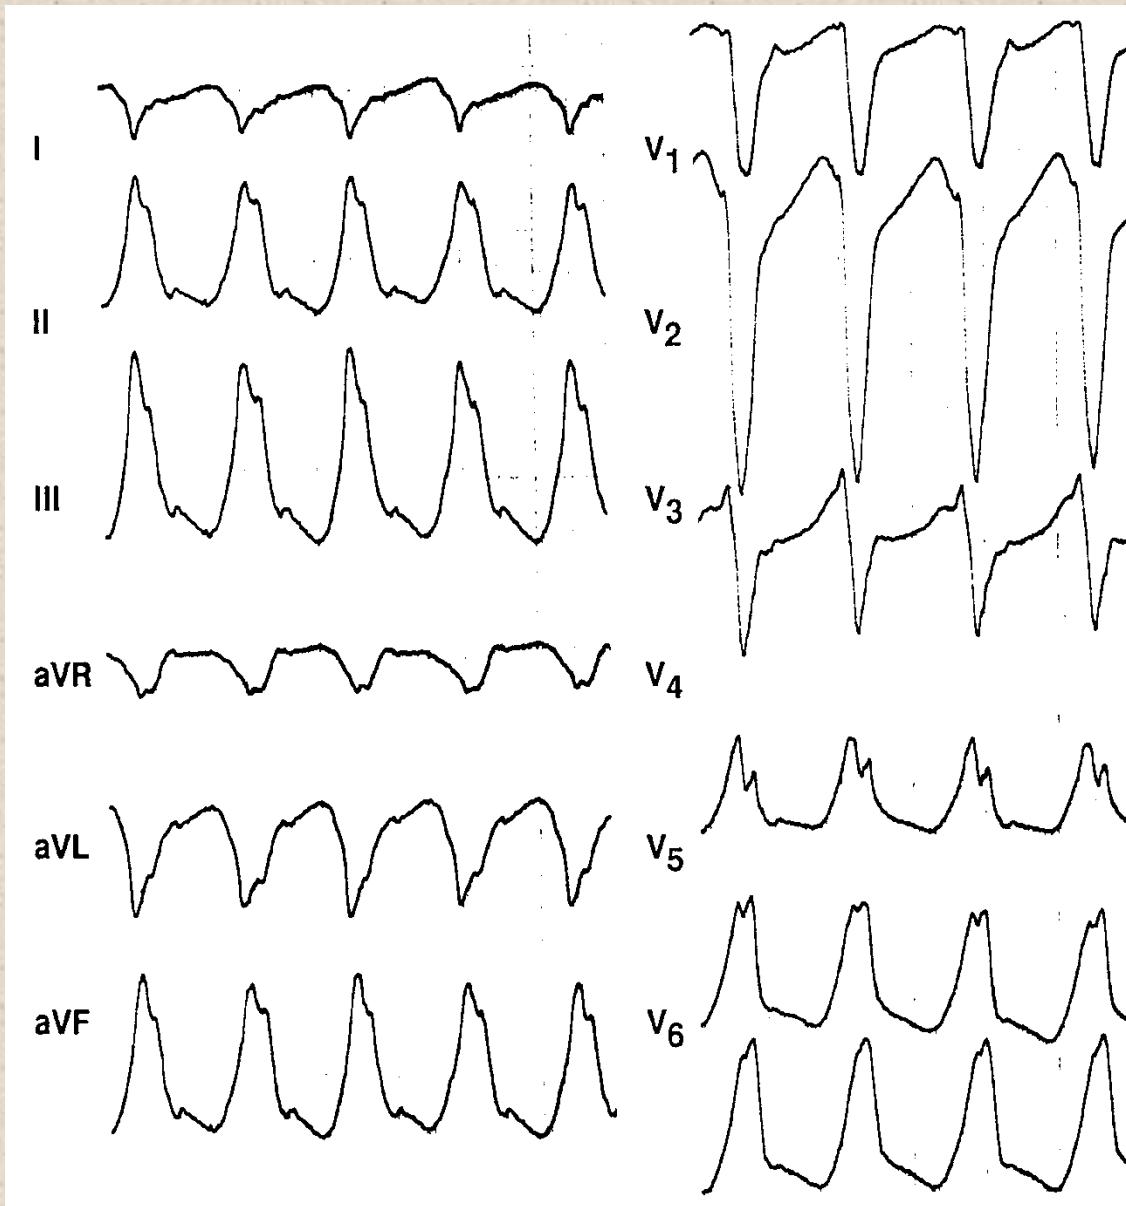

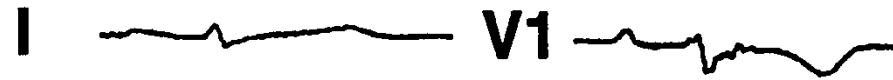

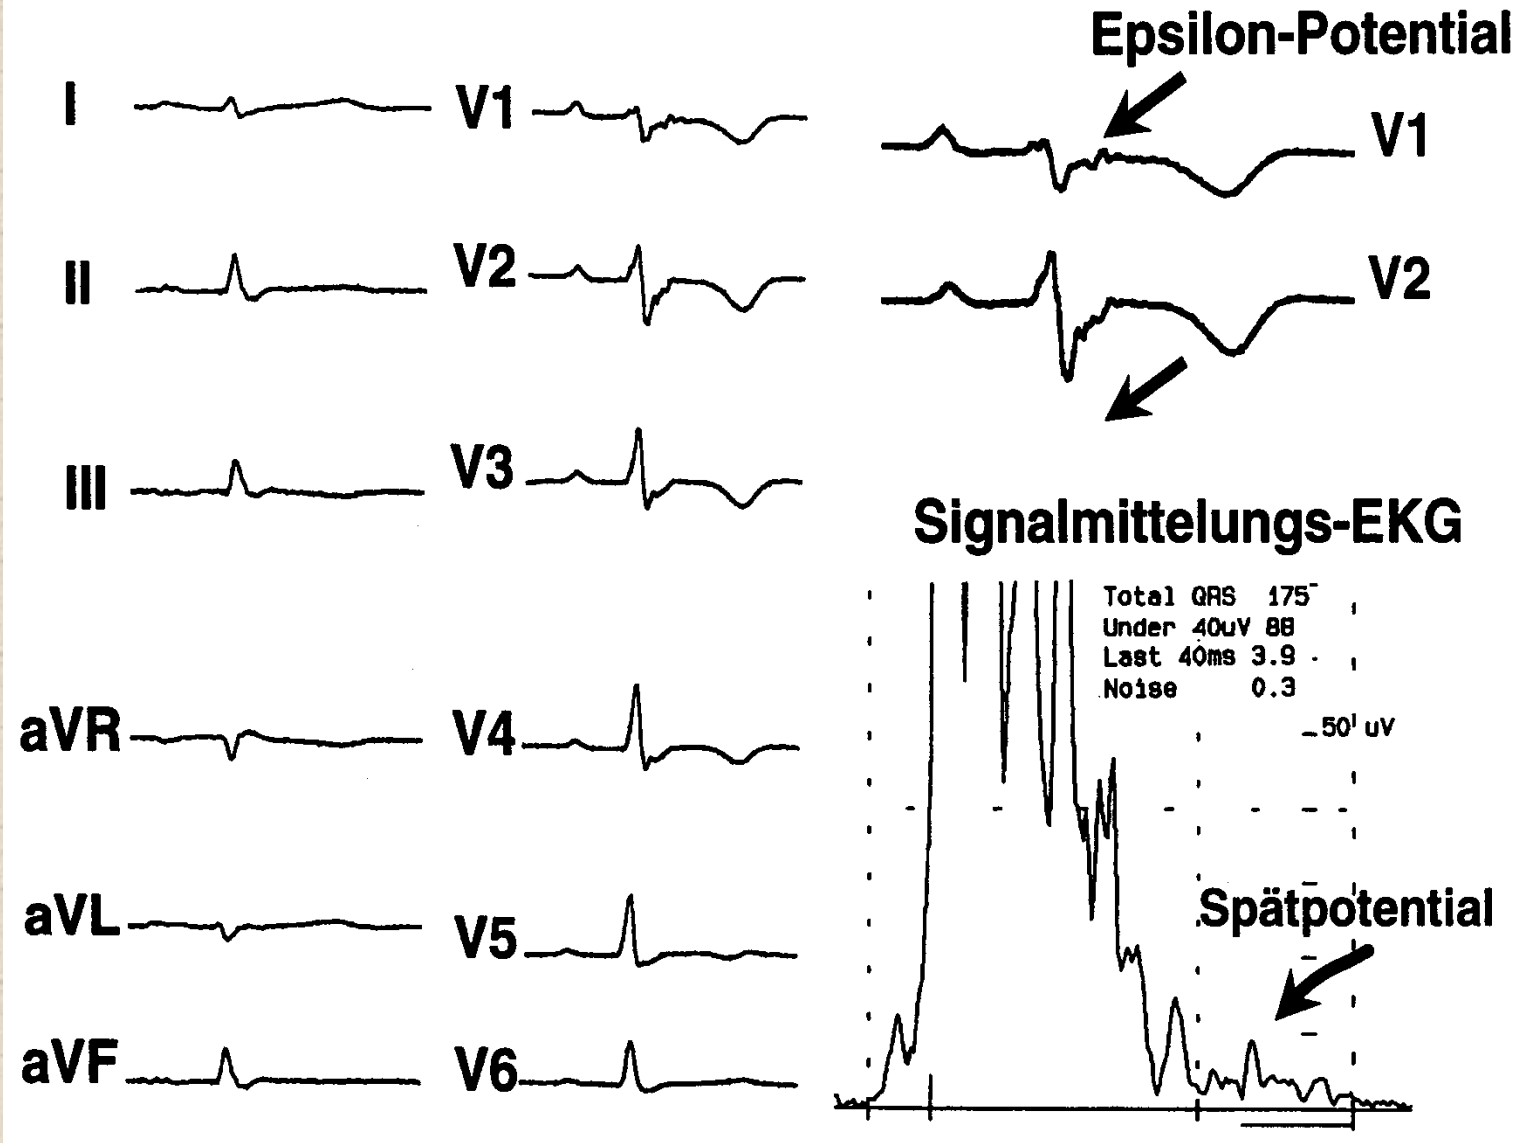

Idiopathic RV VT

Arrhythmogenic right ventricular cardiomyopathy

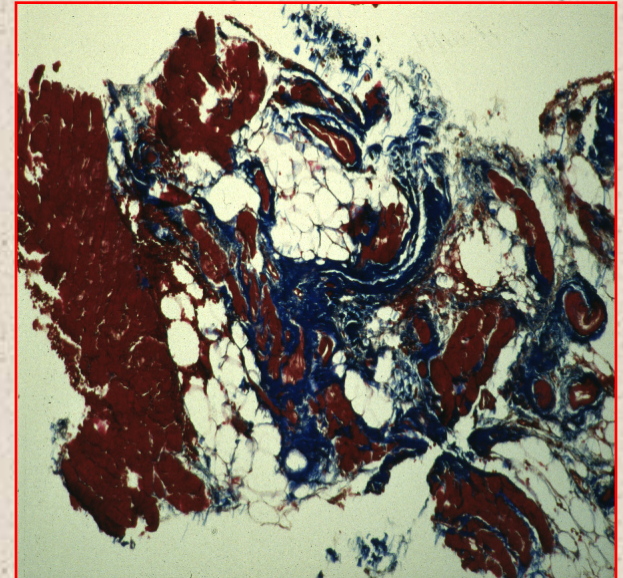

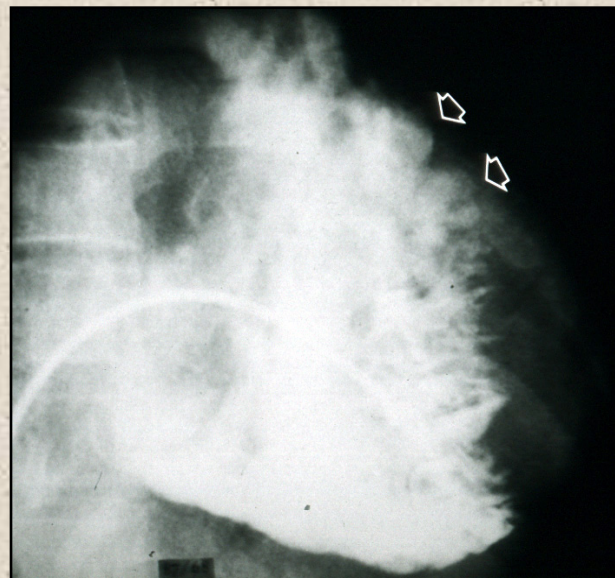

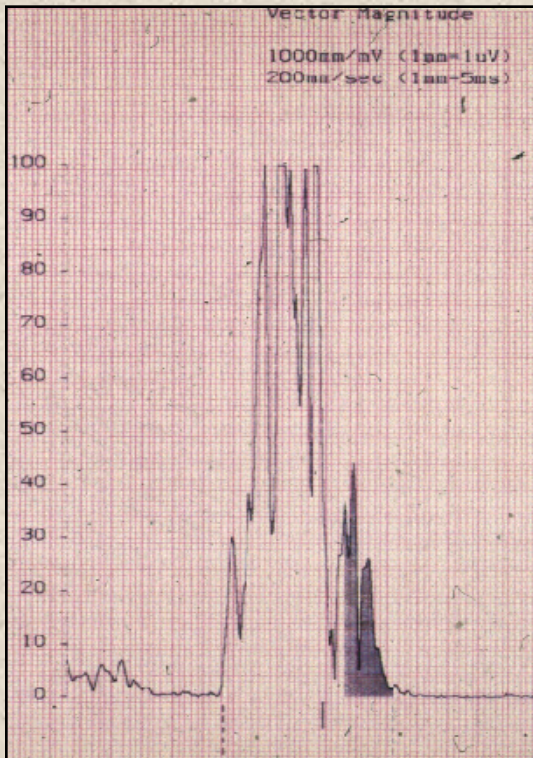

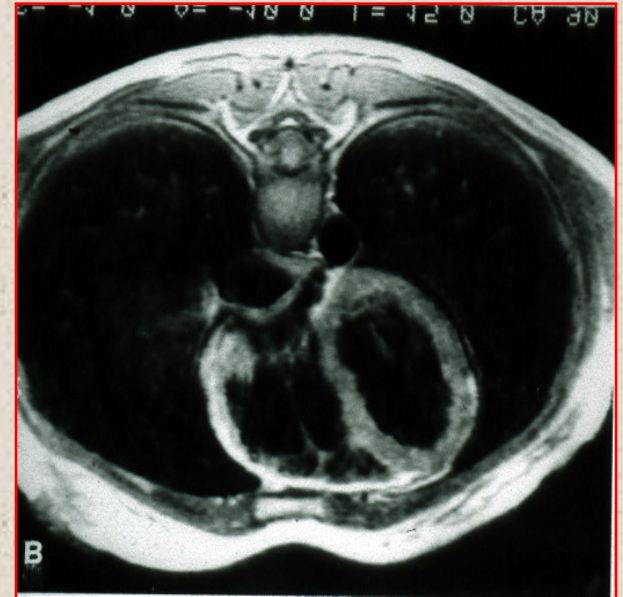

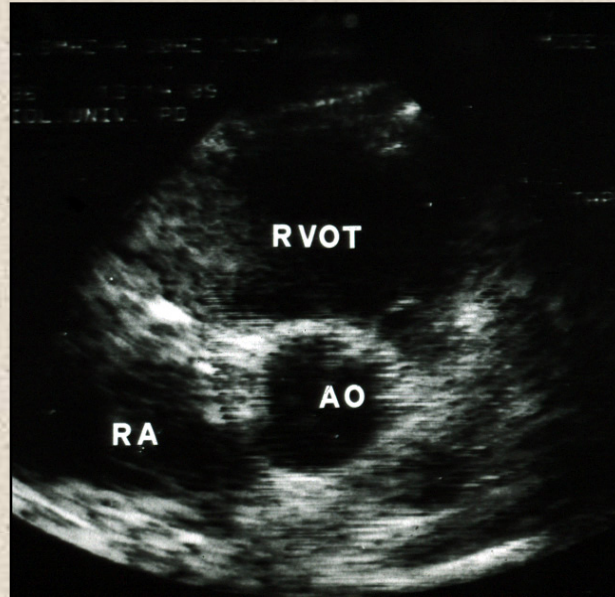

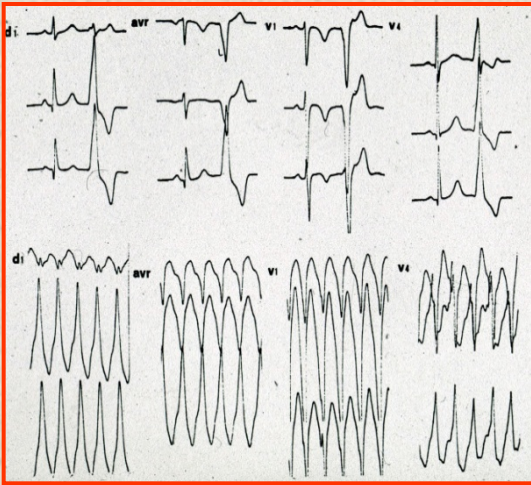

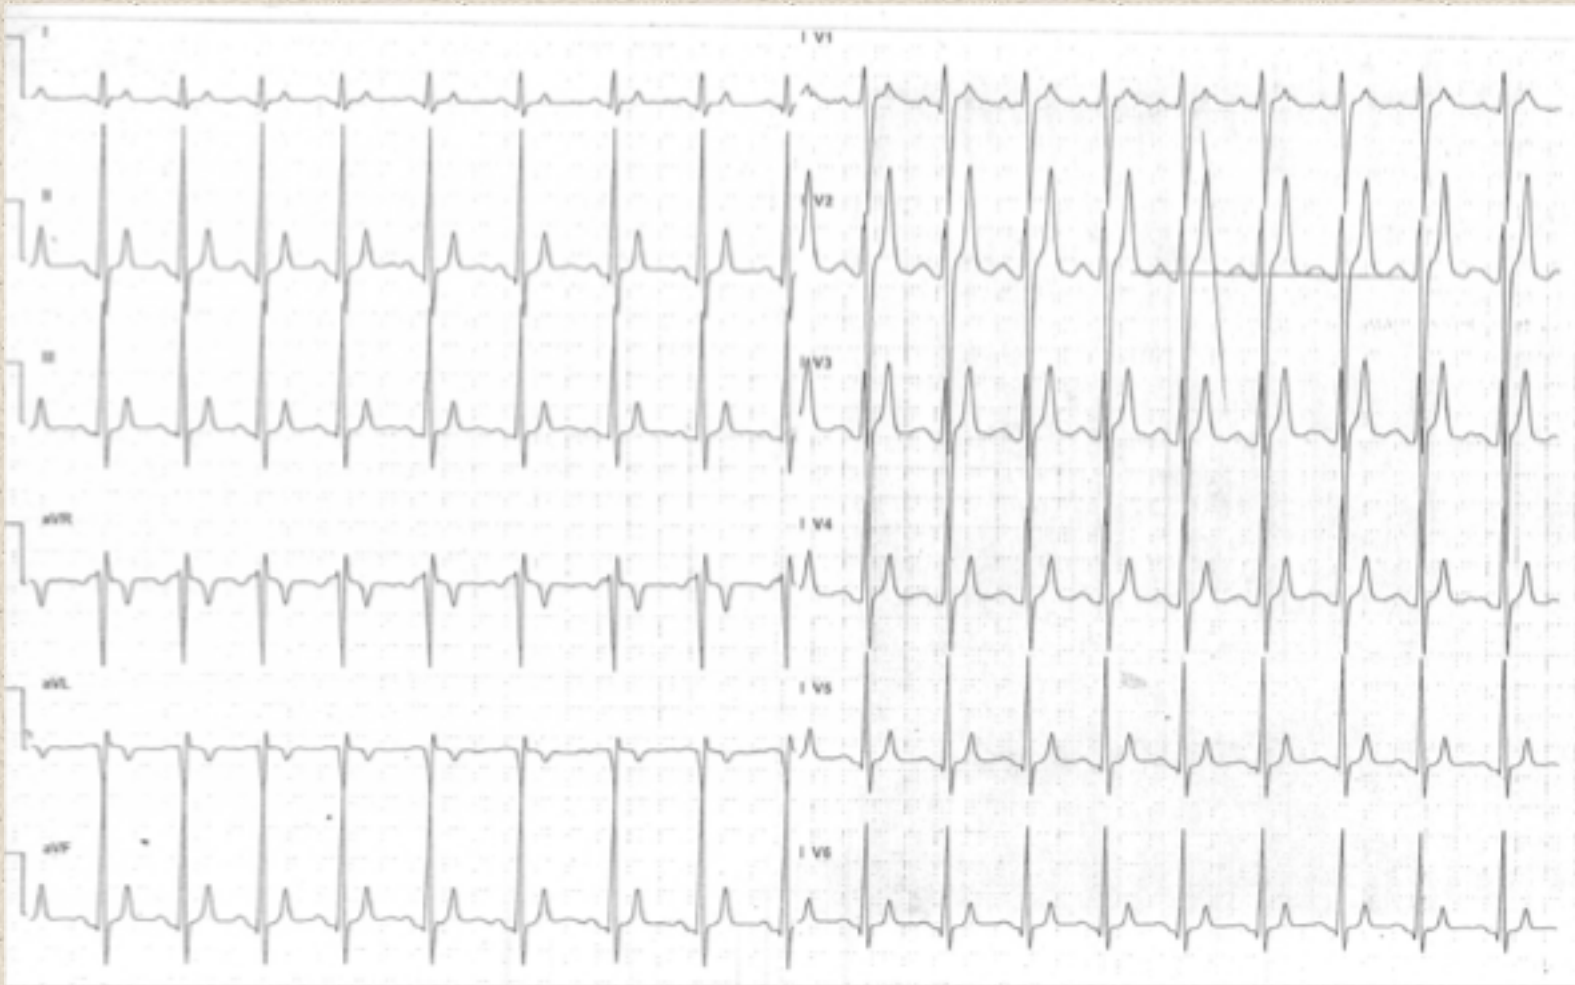

ARVD/C phenotype

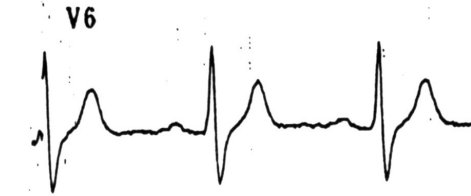

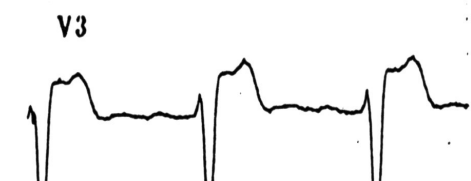

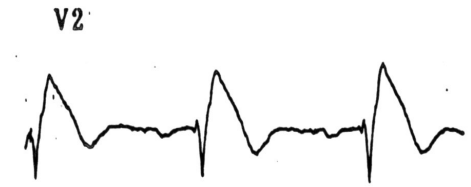

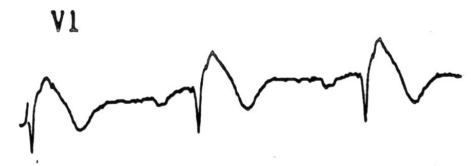

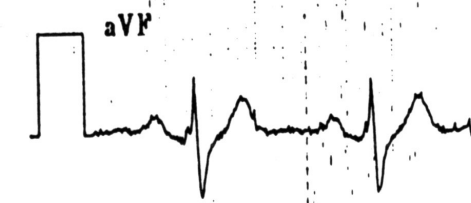

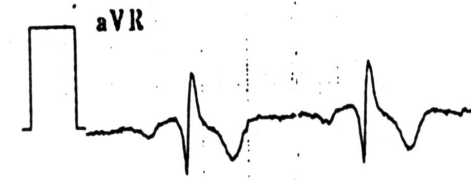

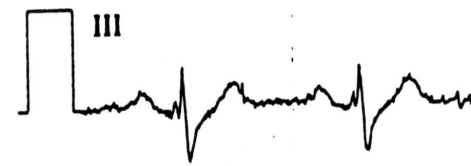

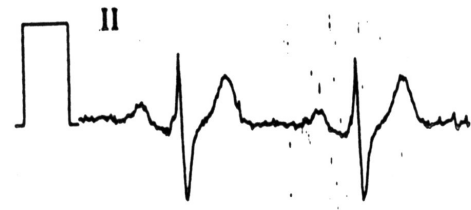

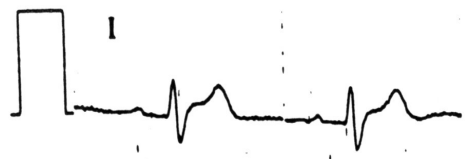

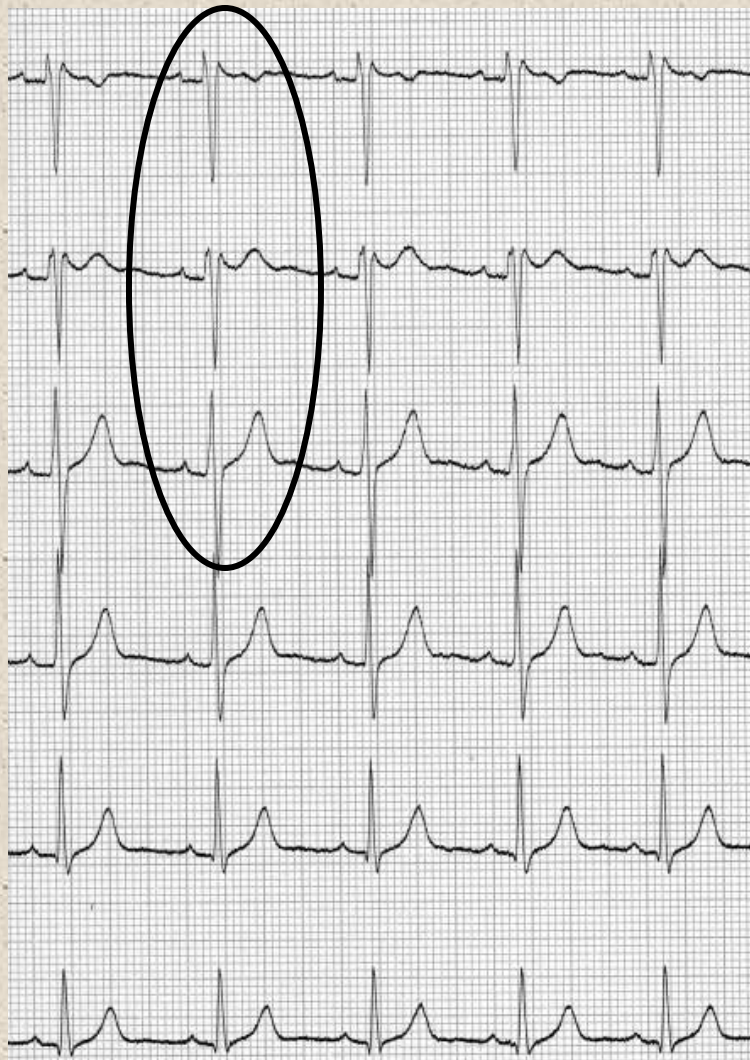

“Arrhythmogenic right ventricular cardiomyopathy/dysplasia”
Thiene G, Nava A, Rossi L, eds. Elsevier, Amsterdam, 1997

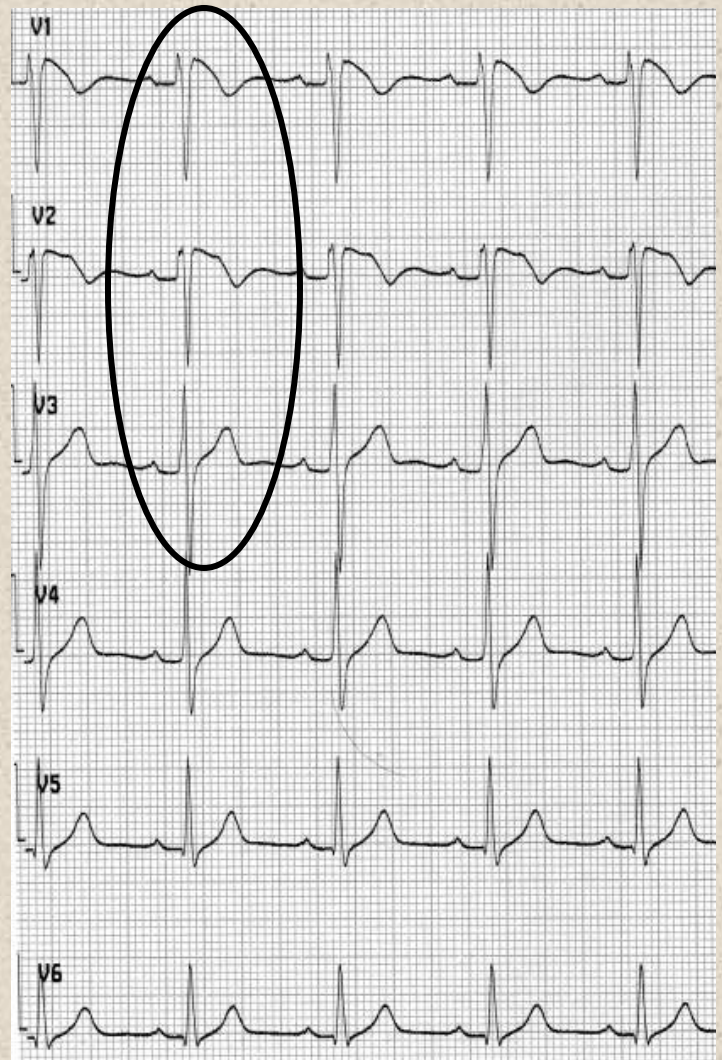

Short QT and PQ depression

Resting ECG

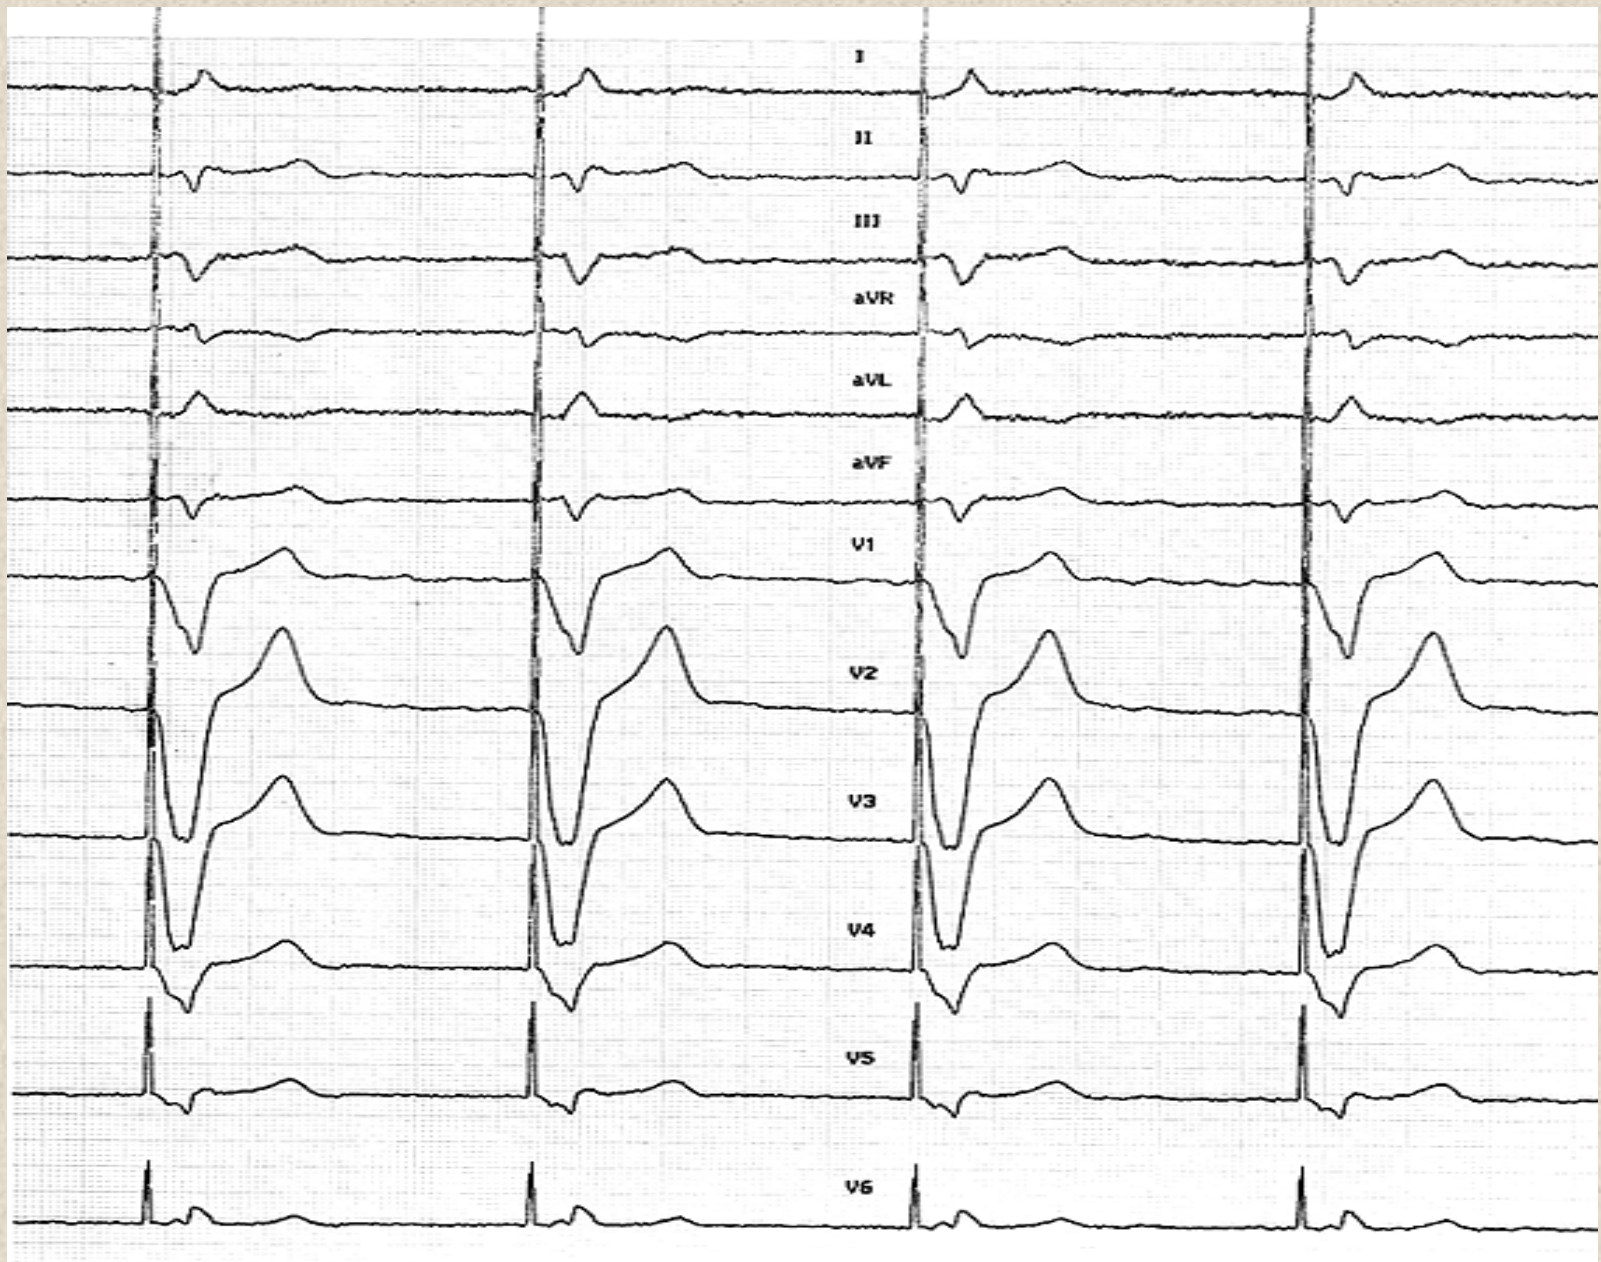

Ajmalin 70 mg i.v.

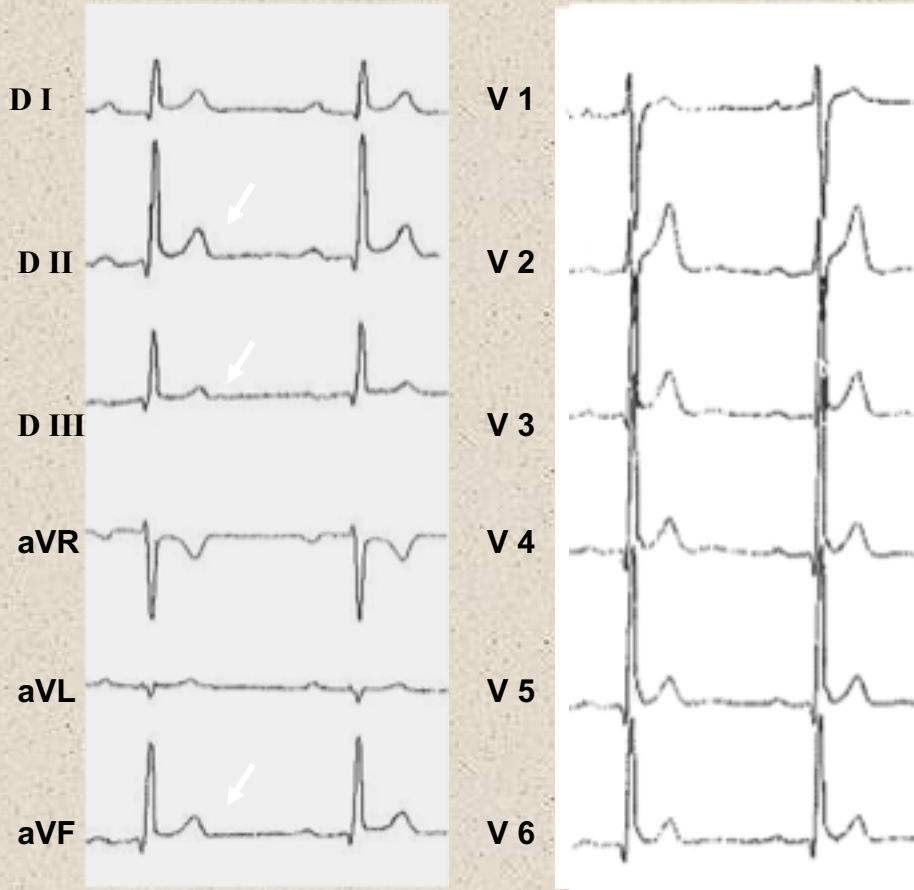

ARRHYTHMIEFONRU 0427

USN 14 00

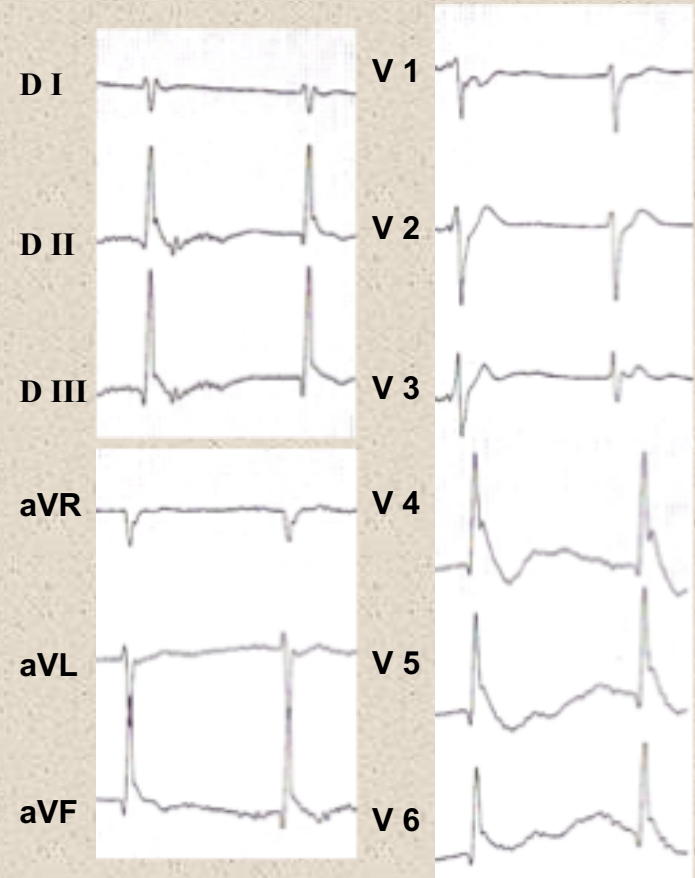

M 22yrs

April 2004

March 2006

Incidence of Early Repolarization in the inferolateral leads in IVF patients

Screening of all idiopathic VF from ICD databases

Early repolarization on Baseline ECGs defined as:

- Slurring (late delta) or notch at the end of QRS, with J point $>0.1\text{mV}$ in ≥ 2 leads
- Left precordial and/or inferior and/or lateral ECG leads (excluding V1-V3 for Brugada/ARVD)

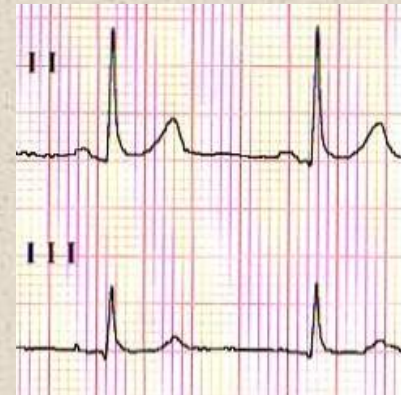

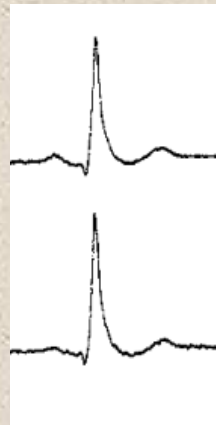

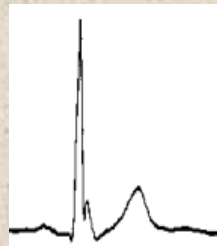

Ventricular Fibrillation with 'Early Repolarization'

Incidence of early repolarization

31% ie 66 pts with IVF vs 4% in controls (p=0.002)

Amplitude of J point

$2.15 \pm 1.2\text{mm}$ in IVF vs $1.05 \pm 0.2\text{mm}$ in controls

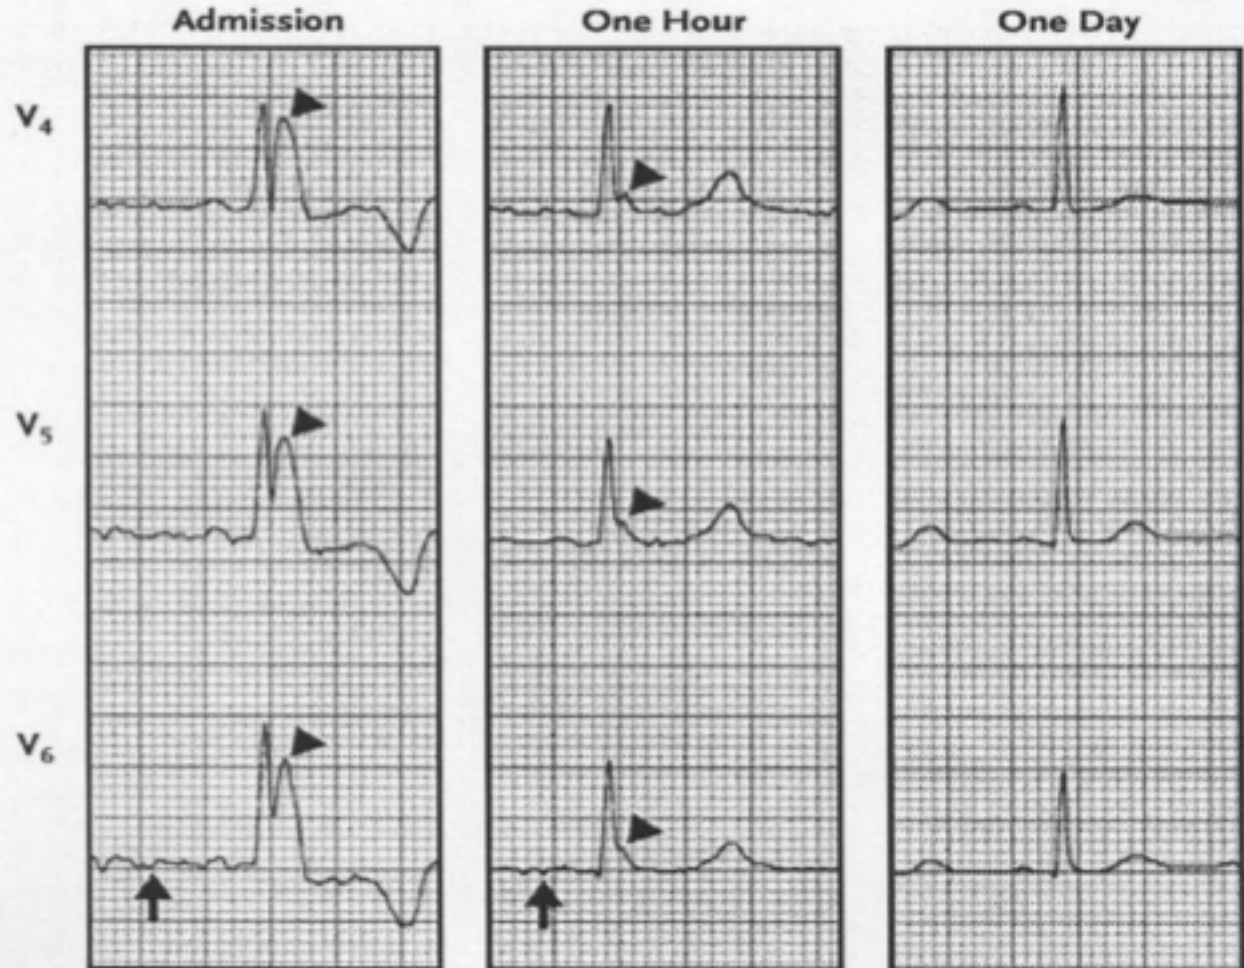

Sudden Cardiac Arrest Associated with Early Repolarization

Early Repolarisationssyndrom

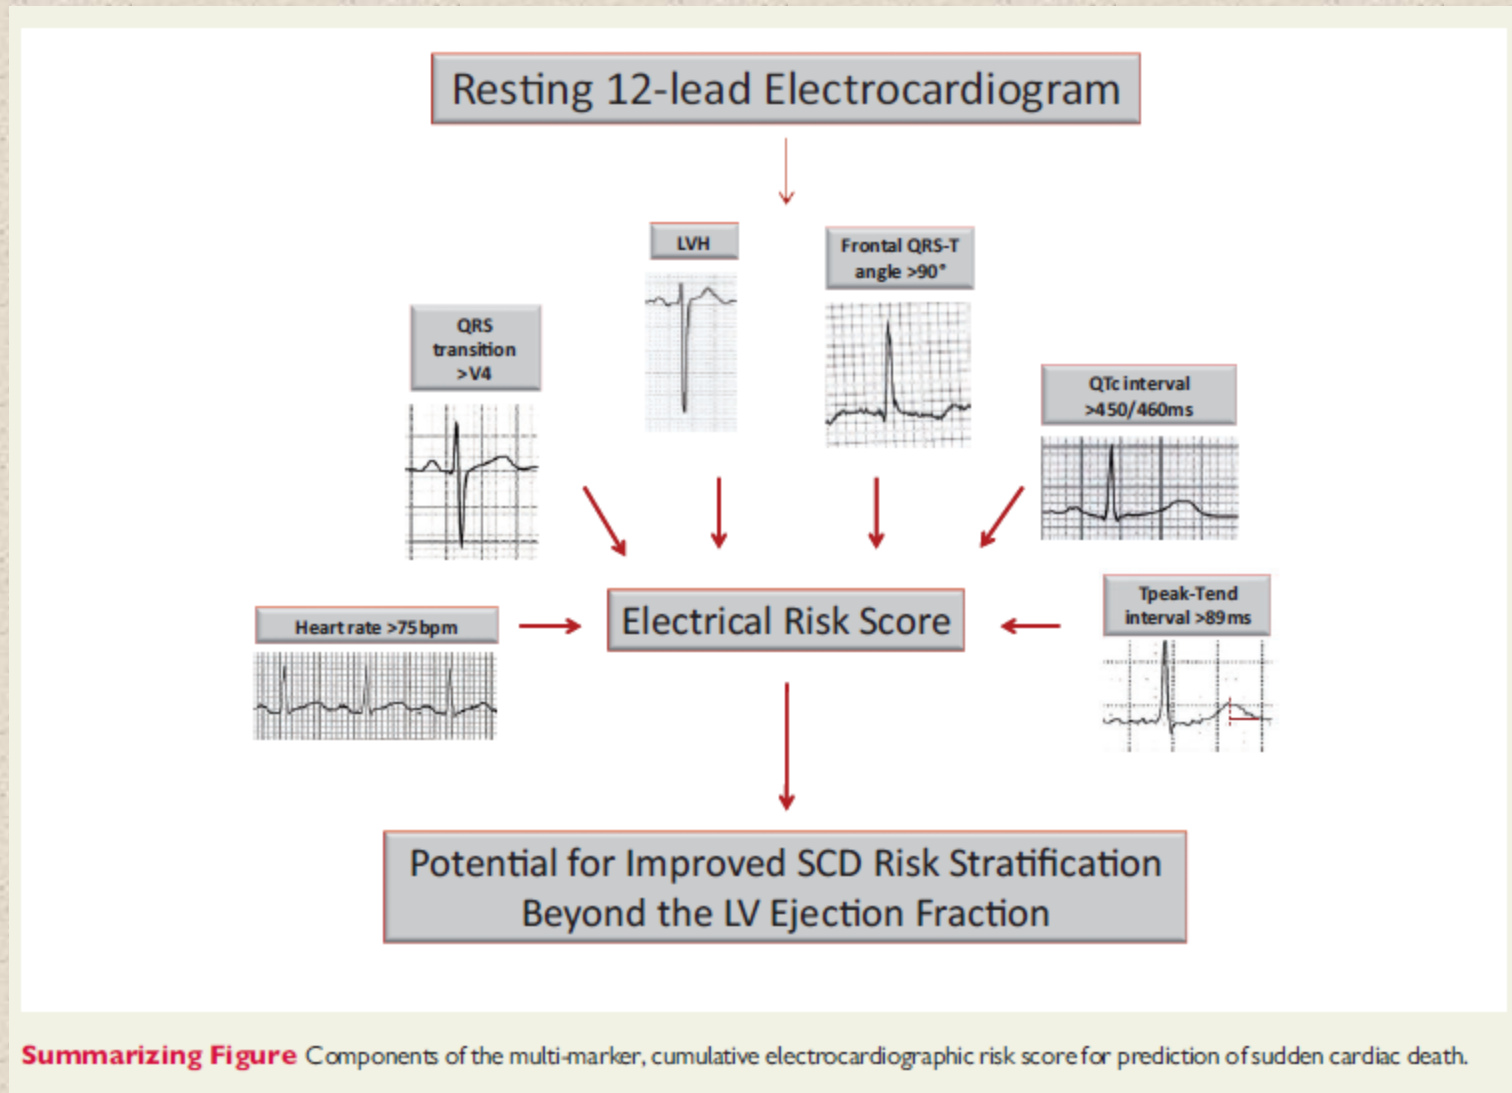

Electrical risk score beyond the left ventricular ejection fraction: prediction of sudden cardiac death in the Oregon Sudden Unexpected Death Study and the Atherosclerosis Risk in Communities Study

Aapo L. Aro^{1,2†}, Kyndaron Reinier^{1†}, Carmen Rusinaru¹, Audrey Uy-Evanado¹, Navid Darouian¹, Derek Phan¹, Wendy J. Mack³, Jonathan Jui⁴, Elsayed Z. Soliman⁵, Larisa G. Tereshchenko⁴, and Sumeet S. Chugh^{1*}

European Heart Journal 2017; 38: 3017-3025

ECG risk score and sudden cardiac arrest

Summarizing Figure Components of the multi-marker, cumulative electrocardiographic risk score for prediction of sudden cardiac death.

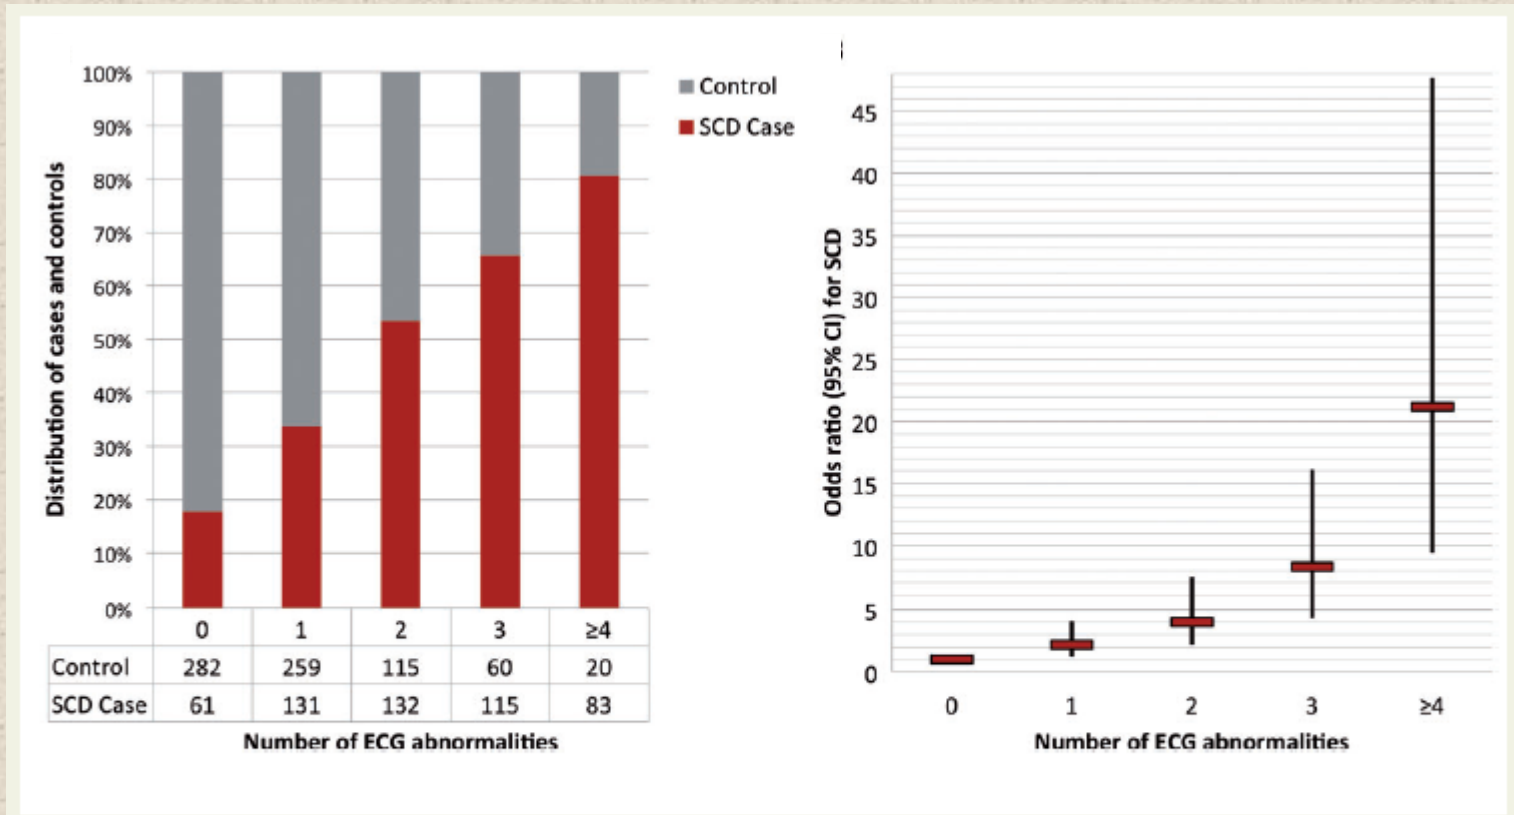

ECG risk score and sudden cardiac arrest

Electrocardiographic characteristics of SCD cases and controls, and unadjusted odds ratios for SCD associated with individual parameters

ECG pattern	Cases (n = 522)	Controls (n = 736)	Odds ratio (95% CI)	P-value
Heart rate >75bpm	266 (51%)	167 (23%)	3.5 (2.8–4.5)	<0.001
QRSd >110ms	72 (14%)	57 (8%)	1.9 (1.3–2.8)	<0.001
Prolonged QTc ^a	247 (47%)	114 (15%)	4.9 (3.8–6.4)	<0.001
Tpeak-Tend >89ms	219 (42%)	188 (26%)	2.1 (1.7–2.8)	<0.001
QRS-T angle >90°	142 (27%)	103 (14%)	2.3 (1.7–3.1)	<0.001
Delayed QRS transition zone	147 (28%)	123 (17%)	2.0 (1.5–2.6)	<0.001
Electrocardiographic LVH	83 (16%)	59 (8%)	2.2 (1.5–3.1)	<0.001
Delayed intrinsicoid deflection	104 (20%)	107 (15%)	1.5 (1.1–2.0)	0.01

ECG risk score and sudden cardiac arrest

Prevalence of ECG abnormalities in the Oregon SUDS, and risk of SCD associated with the ECG risk score

ECG abnormalities between SCD cases and controls

Cumulative risk of SCD associated with the presence of multiple ECG abnormalities

ECG risk score and sudden cardiac arrest

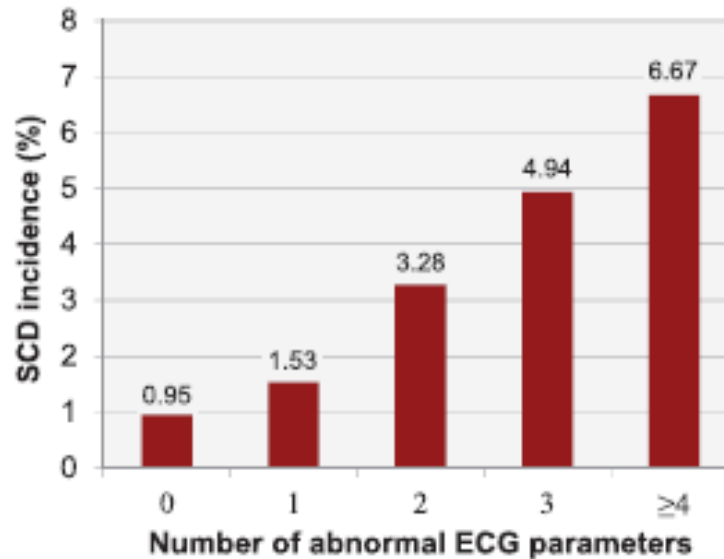

Figure 2 Incidence of sudden cardiac death (SCD) in the ARIC cohort. Observed cumulative incidence of SCD associated with the presence of multiple electrocardiogram (ECG) abnormalities in the ARIC validation cohort during the mean follow-up of 14 years.

Conclusions

- **The ECG is an old tool that should be revisited.**
 - **The ECG is neglected for risk stratification.**
 - **Serial ECG's are important for risk assessment.**
 - **The ECG is underused.**
-
